Product manual
4104
Universal uni-/bipolar
signal transmitter
6 Product Pillars

to meet your every need

Individually outstanding, unrivalled in combination

With our innovative, patented technologies, we make signal conditioning smarter and simpler. Our portfolio is composed of six product areas, where we offer a wide range of analog and digital devices covering over a thousand applications in industrial and factory automation. All our products comply with or surpass the highest industry standards, ensuring reliability in even the harshest of environments and have a 5-year warranty for greater peace of mind.

Our range of temperature transmitters and sensors provides the highest level of signal integrity from the measurement point to your control system. You can convert industrial process temperature signals to analog, bus or digital communications using a highly reliable point-to-point solution with a fast response time, automatic self-calibration, sensor error detection, low drift, and top EMC performance in any environment.

We deliver the safest signals by validating our products against the toughest safety standards. Through our commitment to innovation, we have made pioneering achievements in developing I.S. interfaces with SIL 2 Full Assessment that are both efficient and cost-effective. Our comprehensive range of analog and digital intrinsically safe isolation barriers offers multifunctional inputs and outputs, making PR an easy-to-implement site standard. Our backplanes further simplify large installations and provide seamless integration to standard DCS systems.

We provide inexpensive, easy-to-use, future-ready communication interfaces that can access your PR installed base of products. The detachable 4501 Local Operator Interface (LOI) allows for local monitoring of process values, device configuration, error detection and signal simulation. The next generation, our 4511 Remote Operator Interface (ROI) does all that and more, adding remote digital communications via Modbus/RTU, while the analog output signals are still available for redundancy. With the 4511 you can further expand connectivity with a PR gateway, which connects via industrial Ethernet, wirelessly through a Wi-Fi router or directly with the devices using our Portable Plant Supervisor (PPS) application. The PPS app is available for iOS, Android and Windows.

Our unique range of single devices covering multiple applications is easily deployable as your site standard. Having one variant that applies to a broad range of applications can reduce your installation time and training, and greatly simplify spare parts management at your facilities. Our devices are designed for long-term signal accuracy, low power consumption, immunity to electrical noise and simple programming.

Our compact, fast, high-quality 6 mm isolators are based on microprocessor technology to provide exceptional performance and EMC-immunity for dedicated applications at a very low total cost of ownership. They can be stacked both vertically and horizontally with no air gap separation between units required.

Our display range is characterized by its flexibility and stability. The devices meet nearly every demand for display readout of process signals, and have universal input and power supply capabilities. They provide a real-time measurement of your process value no matter the industry, and are engineered to provide a user-friendly and reliable relay of information, even in demanding environments.

Warning
This device is designed for connection to hazardous electric voltages. Ignoring this warning can result in severe personal injury or mechanical damage.
To avoid the risk of electric shock and fire, the safety instructions of this guide must be observed and the guidelines followed. The specifications must not be exceeded, and the device must only be applied as described in the following.
Prior to the commissioning of the device, this installation guide must be examined carefully.
Only qualified personnel (technicians) should install this device. If the equipment is used in a manner not specified by the manufacturer, the protection provided by the equipment may be impaired.

Warning
Until the device is fixed, do not connect hazardous voltages to the device. The following operations should only be carried out on a disconnected device and under ESD safe conditions:
- General mounting, connection and disconnection of wires.
- Troubleshooting the device.

Repair of the device and replacement of circuit breakers must be done by PR electronics A/S only.

Warning
Do not open the front plate of the device as this will cause damage to the connector for the display / programming front PR 4511/4501.
This device contains no DIP-switches or jumpers.
SYSTEM 4000 must be mounted on a DIN rail according to DIN EN 60715.

Symbol identification
Triangle with an exclamation mark: Warning / demand. Potentially lethal situations. Read the manual before installation and commissioning of the device in order to avoid incidents that could lead to personal injury or mechanical damage.

The CE mark proves the compliance of the device with the essential requirements of the directives.

The double insulation symbol shows that the device is protected by double or reinforced insulation.
Safety instructions

Definitions

Hazardous voltages have been defined as the ranges: 75 to 1500 Volt DC, and 50 to 1000 Volt AC.

Technicians are qualified persons educated or trained to mount, operate, and also trouble-shoot technically correct and in accordance with safety regulations.

Operators, being familiar with the contents of this manual, adjust and operate the knobs or potentiometers during normal operation.

Receipt and unpacking

Unpack the device without damaging it and check whether the device type corresponds to the one ordered. The packing should always follow the device until this has been permanently mounted.

Environment

Avoid direct sun light, dust, high temperatures, mechanical vibrations and shock, and rain and heavy moisture. If necessary, heating in excess of the stated limits for ambient temperatures should be avoided by way of ventilation.

Installation Category II, Pollution Degree 2, and Insulation Class II.

The module is designed to be safe at least under an altitude up to 2 000 m.

Mounting

Only technicians, who are familiar with the technical terms, warnings, and instructions in the manual and who are able to follow these, should connect the device. Should there be any doubt as to the correct handling of the device, please contact your local distributor or, alternatively,

PR electronics A/S
www.prelectronics.com

Mounting and connection of the device should comply with national legislation for mounting of electric materials, i.e. wire cross section, protective fuse, and location.

Descriptions of input / output and supply connections are shown in the block diagram and side label.

The following apply to fixed hazardous voltages-connected devices:

- The max. size of the protective fuse is 10 A and, together with a power switch, it should be easily accessible and close to the device. The power switch should be marked with a label indicating that it will switch off the voltage to the device.

Year of manufacture can be taken from the first two digits in the serial number.

UL installation requirements

Use 60/75°C copper conducters only
For use only in pollution degree 2 or better
Max. ambient temperature .......................... 60°C
Max. wire size. ........................................... AWG 26-14
UL file number .............................................. E231911

Calibration and Adjustment

During calibration and adjustment, the measuring and connection of external voltages must be carried out according to the specifications of this manual. The technician must use tools and instruments that are safe to use.

Normal operation

Operators are only allowed to adjust and operate devices that are safely fixed in panels, etc., thus avoiding the danger of personal injury and damage. This means there is no electrical shock hazard, and the device is easily accessible.

Cleaning

When disconnected, the device may be cleaned with a cloth moistened with distilled water.

Liability

To the extent the instructions in this manual are not strictly observed, the customer cannot advance a demand against PR electronics A/S that would otherwise exist according to the concluded sales agreement.
How to demount system 4000

Picture 1:
The device is detached from the DIN rail by moving the bottom lock down.

When front LED flashes red or 4511/4501 display shows AO.ER

The 4104 is designed with a high safety level. Therefore, the device continuously measures the output current. If “S4-20” is selected during configuration, and output current drops to 0 mA, the 4511/4501 display will indicate “AO.ER” and the front LED will turn red. (A 0 mA output can be caused by an open output loop). The error mode can be reset by power cycling the device or stepping through the menu.
Universal uni-/bipolar signal transmitter
4104

- Measures and outputs uni-/bipolar voltage and current signals
- Works with both passive and active inputs and outputs
- Uses the 4511/4501 display for programming and process monitoring
- Fast < 20 mS response time and excellent < 0.05% accuracy
- Universally powered by 21.6...253 VAC / 19.2...300 VDC

Application
- Fast < 20 ms response time for measuring signals produced by torque, position, current & acceleration sensors.
- User configurable bipolar or unipolar I/O means the 4104 is suitable for nearly any voltage or current conversion.
- The excitation source enables measurement of two or three wire transmitters.
- The active or passive I/O makes the 4104 perfect for power matching current loops.
- Converts narrow bipolar inputs to wide bipolar or unipolar outputs, e.g., ± 1 volt input = ± 10 volt or 4-20 mA output.
- Selectable direct or inverse I/O makes the 4104 suitable for proportional control applications.
- The "V-curve" function outputs 100% - 0 - 100% when a 0 - 100% input signal is present.

Technical characteristics
- The latest analogue and digital techniques are used to obtain maximum accuracy and immunity to interference.
- The current output can drive up to 800 Ohms, with an adjustable response time of 0.0...60.0 seconds.
- Exceptional mA output load stability of < 0.001% of span/100 Ohm.
- Meets the NAMUR NE21 recommendations, ensuring high accuracy in harsh EMC environments.
- Meets the NAMUR NE43 recommendations, allowing the control system to easily detect a sensor error.
- Each unit is tested to a high 2.3 kVAC, 3-port galvanic isolation level.
- Excellent signal to noise ratio of > 60 dB.

Mounting / installation / programming
- Very low power consumption means units can be mounted side by side without an air gap – even at 60°C ambient temperature.
- Approved for marine applications.
- Programming, monitoring, and 2-point process calibration is accomplished with the 4501 detachable display or the 4511 detachable digital communication enabler.
- All programming can be password protected.
Applications

Input signals:

Current 2-wire Tx 3-wire Tx Voltage

Output signals:

Current & voltage 2-wire

Power connection:

21.6...253 VAC or 19.2...300 VDC

Safe Area or Zone 2 / Cl. 1 Div. 2, gr. A-D
Functionality
The simple and easily understandable menu structure and the explanatory help texts guide you effortlessly and automatically through the configuration steps, thus making the product very easy to use. Functions and configuration options are described in the section "Configuration / operating the function keys".

Application
- Communications interface for modification of operational parameters in 4104.
- Can be moved from one 4104 device to another and download the configuration of the first unit to subsequent units.
- When mounted in the process, the display shows process values and device status.

Technical characteristics
- LCD display with 4 lines:
  Line 1 (H=5.57 mm) shows the scaled process value - OK or error.
  Line 2 (H=3.33 mm) shows the selected engineering unit.
  Line 3 (H=3.33 mm) shows analog output or TAG no.
  Line 4 shows status for communication and signal trending.
- Programming access can be blocked by assigning a password. The password is saved in the device in order to ensure a high degree of protection against unauthorized modifications to the configuration.

Mounting / demounting the PR 4511/4501
1: Insert the tabs of the PR 4511/4501 into the holes at the top of the device.
2: Hinge the PR 4511/4501 down until it snaps into place.

Demounting of the PR 4511/4501
3: Push the release button on the bottom of the PR 4511/4501 and hinge the the PR 4511/4501 out and up.
4: With the PR 4511/4501 hinged up, remove from holes at the top of the device.
Order

4104 = Universal uni-/bipolar signal transmitter

Accessories

4501 = Display / programming front
4511 = Communication enabler

Electrical specifications

Environmental conditions:
Operating temperature ...................................... -20°C to +60°C

Auxiliary supplies:
2-wire loop supply (terminal 43, 44) ...................... > 16 V @ 20 mA
3-wire loop supply (terminal 42, 44) ..................... > 18 V @ 20 mA
Loop supply limitation (terminal 44, nom.) .............. 30 mA

| Accuracy values |
|-----------------|-----------------|-----------------|
| Input type      | Absolute accuracy | Temperature coefficient |
| All             | ≤ ±0.05% of span  | ≤ ±0.01% of span / °C |

EMC - immunity influence. .............................. < ±0.5% of span
Extended EMC immunity:
NAMUR NE 21, A criterion, burst ..................... < ±1% of span

of span = of selected range
Input specifications:

Current input:
- Signal range: ±23 mA
- Programmable measurement ranges: 0...20, 4...20, ±10, ±20 mA
- Input voltage drop, nom.: 1.4 V @ 20 mA
- Loop error detection, 4...20 mA:
  - Low detection: < 3.6 mA
  - High detection: > 21 mA

Voltage input:
- Signal range: ±12 VDC
- Programmable measurement ranges: 0...1, 0.2...1, 0...5, 1...5, 0...10, 2...10 V, ±1, ±5 and ±10V
- Input resistance, nom.: 2 MΩ

Current output specifications:

Active unipolar and bipolar mA:
- Programmable ranges: 0-20, 4-20, ±10 and ±20 mA
- V-curve function, 100-0-100%: 20-0-20 mA
- Load, max.: 800 Ω

Passive 2-wire mA:
- Programmable ranges: 0...20 and 4...20 mA
- V-curve function, 100-0-100%: 20-0-20 mA
- External 2-wire loop supply: 3.5...26 V

Common specifications current output:
- Signal range: 0...23 mA (unipolar) / -23...+23 mA (bipolar)
- Current limit: ≤ 28 mA (unipolar) / ±28 mA (bipolar)
- Load stability: ≤ 0.001% of span / 100 Ω
- Response time, programmable: 0.0...60.0 s
- Output limitation at outside range:
  - on 4...20 and 20...4 mA signals: 3.8...20.5 mA
  - on other unipolar signals: 0 and 115% of max. value
  - on bipolar signals: ±115% of min. and max. values
- Sensor error indication, at 4...20 mA input:
  - selectable: Low, High, Zero or None
    - Low - corresponds to 0 mA at 0...20 mA and to 3.5 mA at 4...20 mA
    - High - corresponds to 23 mA at both 0...20 and 4...20 mA
    - Zero - equals 0 mA output
    - None - the output state is undefined

Voltage output specifications:

Programmable ranges: 0/0.2...1, 0/1...5, 0/2...10, ±1, ±5 and ±10 V
- V-curve function, 100-0-100%: 1-0-1 V, 5-0-5 V and 10-0-10 V
- Load, min.: > 500 kΩ
- Response time, programmable: 0.0...60.0 s
- Output limitation at outside range:
  - on unipolar signals starting from 0: 0 and 115% of max. value
  - on unipolar signals with offset: -5% of min. value and 115% of max. value
  - on bipolar signals: ±115% of min. and max. values
- Sensor error indication, at 4...20 mA input:
  - selectable: Low, High, Zero or None
    - Low - corresponds to the selected min range value
    - High - corresponds to the selected max range value
    - Zero - equals 0 V output
    - None - the output state is undefined
Observed authority requirements:
EMC. ................................................................. 2014/30/EU
LVD. ................................................................. 2014/35/EU

All error indications in the display flash once per second. The help text explains the error. If the error is an input loop error, the display backlight flashes as well - this is acknowledged (stopped) by pushing the button.

* Error is acknowledged by either stepping through the basic setup, or by resetting the device power.
Some types of errors can only be acknowledged by resetting the device power.

** Error is acknowledged by stepping through the basic setup.

Configuration / operating the function keys

Documentation for routing diagram.

In general

When configuring the 4104, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:
- ↑ will increase the numerical value or choose the next parameter
- ↓ will decrease the numerical value or choose the previous parameter
- ✿ will save the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0. Pressing and holding ✿ will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.

Further explanations

Password protection: Programming access can be blocked by assigning a password. The password is saved in the device in order to ensure a high degree of protection against unauthorised modifications to the configuration. Default password 2008 allows access to all configuration menus.

Signal and loop error info via display front 4511/4501

Input loop error at 4-20 mA signal is displayed as LO.ER (see table page 13). Input signals outside the selected range are displayed as IN.LO indicating low input signal or IN.HI indicating high input signal (see table page 13). Error indication is displayed in line 1 as text and at the same time the backlight flashes. A flashing bullet in line 4 is indicating correct functioning of 4511/4501.

Signal and sensor error indication without display front

Status of the unit can also be read from the red/green LED in the front of the device.
- Green flashing LED 13 Hz indicates normal operation.
- Green flashing LED 1 Hz indicates loop error.
- Steady green LED indicates internal error.
- Steady red LED indicates fatal error.

Advanced functions

The unit gives access to a number of advanced functions which can be reached by answering “Yes” to the point “ADV.SET”.

Memory (MEM): In the memory menu you can save the configuration of the device in the 4511/4501, and then move the 4511/4501 onto another device of the same type and download the configuration in the new device.

Display setup (DISP): Here you can adjust the brightness contrast and the backlight. Setup of TAG numbers with 6 alphanumerics. Selection of functional readout in line 3 of the display - choose between readout of analog output or tag no.

Two-point process calibration (CAL): The device can be process-calibrated in 2 points to fit a given input signal. A low input signal (not necessarily 0%) is applied and the actual value is entered via 4511/4501. Then a high signal (not necessarily 100%) is applied and the actual value is entered via 4511/4501. If you accept to use the calibration, the device will work according to this new adjustment. If you later reject this menu point or choose another type of input signal the device will return to factory calibration.

Process simulation function (SIM): In the menu point “EN.SIM” it is possible to simulate an input signal by means of the arrow keys and thus control the output signal up or down. You must exit the menu by pressing ✿ (no time-out). The simulation function exits automatically, if the 4511/4501 is detached.

Password (PASS): Here you can choose a password between 0000 and 9999 in order to protect the unit against unauthorised modifications to the configuration. The unit is delivered default without password.
**Language (LANG):** In the menu "LANG" you can choose between 7 different language versions of help texts that will appear in the menu. You can choose between UK, DE, FR, IT, ES, SE and DK.

**Output function (OFUN):** Here the output characteristics can be set to either Direct (DIR) or Inverted (INV) function. Output type and range are set in the normal programming menu. If the selected output range is starting at zero, V-curved output function (VFUN) can also be selected. The output characteristics will then be 100-0-100% on the basis of a linear 0-100% input signal.

**Auto diagnostics**

The device performs an advanced auto diagnosis of the internal circuits - check tables on page 13.
Routing diagram

If no key is activated for 1 minute, the display will return to the default state 1.0 without saving configuration changes.

Increase value / choose next parameter
Decrease value / choose previous parameter
Save the chosen value and proceed to the next menu
Hold = Back to previous menu / return to menu 1.0 without saving.

Select -10...10 mA input range
Select -20...20 mA input range
[5] Select 0.0...1 V input range
Select 0.2...1 V input range
Select 0.5 V input range
Select 1.5 V input range
Select 0.10 V input range
Select 2...10 V input range
Select -1...1 V input range
Select -5...5 V input range
Select -10...10 V input range
[6] Select display unit
[7] Select decimal point position
[8] Set display range low
[9] Set display range high
[10] Select current as analog output type
Select voltage as analog output type
[11] Select 0...20 mA output range
Select 4...20 mA output range
Select 4...20 mA with safety readback
Select -10...10 mA output range
Select -20...20 mA output range
[12] Select 0.0...1 V output range
Select 0.2...1 V output range
Select 0...5 V output range
Select 1...5 V output range
Select 0...10 V output range
Select 2...10 V output range
Select -1...1 V output range
Select -5...5 V output range
Select -10...10 V output range
[13] Select active output mode
Select passive output mode
[14] Select no error action - output undefined at error
Select downscale at error
Select zero output at error
Select upscale at error
[15] Set Analog output response time in seconds
[16] Select Analog output function
Enter Language setup
Enter Password setup
Enter Simulation mode
Perform Process calibration
Enter Display setup
Perform Memory operations
[17] Load saved configuration into module
Save configuration in display front
[18] Adjust LCD contrast
[19] Adjust LCD backlight
[20] Write a 6-character device TAG

[21] Analog output value is shown in display line 3
Device TAG is shown in display line 3
[22] Calibrate Input low to process value?
[23] Set value for low calibration point
[24] Calibrate Input high to process value?
[25] Set value for high calibration point
[26] Use process calibration values
[27] Enable simulation mode?
[28] Set the input simulation value
[29] Enable password protection?
[30] Set new password
[31] Select language
[32] Select direct output mode
Select inverted output mode
Select V-function output mode
[33] Display underrange
[34] Display overrange
[35] Input underrange
[36] Input overrange
[37] Analog output supply error
[38] Analog output error
- check output connections and reset power
[39] Configuration error
- default configuration is loaded
[40] RAM memory error
[41] EEprom memory error
[42] A/D converter error
[43] No communication
[44] Loop error
[45] Invalid configuration type or version
[46] External flash error
[47] Internal flash error

We are near you, all over the world

Our trusted red boxes are supported wherever you are

All our devices are backed by expert service and a 5-year warranty. With each product you purchase, you receive personal technical support and guidance, day-to-day delivery, repair without charge within the warranty period and easily accessible documentation.

We are headquartered in Denmark, and have offices and authorized partners the world over. We are a local business with a global reach. This means that we are always nearby and know your local markets well. We are committed to your satisfaction and provide PERFORMANCE MADE SMARTER all around the world.

For more information on our warranty program, or to meet with a sales representative in your region, visit prelectronics.com.
Benefit today from

PERFORMANCE MADE SMARTER

PR electronics is the leading technology company specialized in making industrial process control safer, more reliable and more efficient. Since 1974, we have been dedicated to perfecting our core competence of innovating high precision technology with low power consumption. This dedication continues to set new standards for products communicating, monitoring and connecting our customers’ process measurement points to their process control systems.

Our innovative, patented technologies are derived from our extensive R&D facilities and from having a great understanding of our customers’ needs and processes. We are guided by principles of simplicity, focus, courage and excellence, enabling some of the world’s greatest companies to achieve PERFORMANCE MADE SMARTER.
