Bipolar isolated converter / splitter

3118

- Conversion of voltage and current bipolar process signals to uni-/bipolar signals
- Output: Current and voltage
- Excellent accuracy, better than 0.05% of span
- Splitter function: 1 in - 2 out
- Multiple signal ranges are selectable via DIP-switches

Functional highlights

- Isolating converter and splitter which can be used for signal conversion of standard bipolar analog process signals into two individual unipolar analog signals.
- High 4-port isolation provides surge suppression that protects the control system from transients and noise and eliminates ground loops.
- The analog output can be easily configured and programmed to be bipolar in the ranges ±10 mA and ±20 mA.
- All terminals are over-voltage protected, polarity protected and short-circuit protected.
- The device can be mounted in Safe area or in Zone 2 / Division 2 areas and is approved for marine applications.

Programming

- Flexible 24 VDC (±30%) supply via power rail or connectors.
- Excellent conversion accuracy in all available ranges, better than 0.05% of span.
- Fast response time < 7 ms / > 100 Hz bandwidth — 10 Hz bandwidth damping possible via DIP switch.
- Meeting the NAMUR NE21 recommendations, this device ensures top measurement performance in harsh EMC environments.
- Excellent signal/noise ratio > 60 dB.
- High galvanic isolation of 2.5 kVAC.
- Inputs and outputs are floating and galvanically separated.
- A green front LED indicates normal operation and malfunction.
- Wide ambient temperature range: -25...+70°C.

Mounting / installation

- Fast and easy configuration of factory-calibrated measurement ranges via DIP switches.
