9106B

HART® Transparent Repeater

No. 9106V102-UK
Product version: 9106-002

PR electronics A/S offers a wide range of analogue and digital signal conditioning modules for industrial automation. The product range includes Isolators, Displays, Ex Interfaces, Temperature Transmitters, and Universal Modules. You can trust our products in the most extreme environments with electrical noise, vibrations and temperature fluctuations, and all products comply with the most exacting international standards. »Signals the Best« is the epitome of our philosophy - and your guarantee for quality.

PR electronics A/S offre une large gamme de produits pour le traitement des signaux analogiques et numériques dans tous les domaines industriels. La gamme de produits s'étend des transmetteurs de température aux afficheurs, des isolateurs aux interfaces SI, jusqu'aux modules universels. Vous pouvez compter sur nos produits même dans les conditions d'utilisation sévères, p.ex. bruit électrique, vibrations et fluctuations de température. Tous nos produits sont conformes aux normes internationales les plus strictes. Notre devise »SIGNALS the BEST« c'est notre ligne de conduite - et pour vous l’assurance de la meilleure qualité.

**WARNING**

The following operations should only be carried out on a disconnected device and under ESD-safe conditions:
- General mounting, connection and disconnection of wires.
- Troubleshooting the device.

**Repair of the device and replacement of circuit breakers must be done by PR electronics A/S only.**

---

**WARNING**

Do not open the front plate of the device as this will cause damage to the connector for the display / programming front PR 4501. This device contains no DIP-switches or jumpers.

---

**SYMBOL IDENTIFICATION**

- **Triangle with an exclamation mark**: Read the manual before installation and commissioning of the device in order to avoid incidents that could lead to personal injury or mechanical damage.

- **The CE mark** proves the compliance of the device with the essential requirements of the directives.

- **The double insulation symbol** shows that the device is protected by double or reinforced insulation.

- **Ex devices** have been approved according to the ATEX directive for use in connection with installations in explosive areas. See installation drawings in appendix.

---

**SAFETY INSTRUCTIONS**

**DEFINITIONS**

**Hazardous voltages** have been defined as the ranges: 75...1500 Volt DC, and 50...1000 Volt AC.

**Technicians** are qualified persons educated or trained to mount, operate, and also troubleshoot technically correct and in accordance with safety regulations.

**Operators**, being familiar with the contents of this manual, adjust and operate the knobs or potentiometers during normal operation.
RECEIPT AND UNPACKING
Unpack the device without damaging it and check whether the device type corresponds to the one ordered. The packing should always follow the device until this has been permanently mounted.

ENVIRONMENT
Avoid direct sunlight, dust, high temperatures, mechanical vibrations and shock, as well as rain and heavy moisture. If necessary, heating in excess of the stated limits for ambient temperatures should be avoided by way of ventilation. The device must be installed in pollution degree 2 or better. The device is designed to be safe at least under an altitude up to 2 000 m.

MOUNTING
Only technicians who are familiar with the technical terms, warnings, and instructions in the manual and who are able to follow these should connect the device. Should there be any doubt as to the correct handling of the device, please contact your local distributor or, alternatively,

PR electronics A/S
www.prelectronics.com

The use of stranded wires is not permitted for mains wiring except when wires are fitted with cable ends.

Descriptions of input / output and supply connections are shown in the block diagram and on the side label.

The device is provided with field wiring terminals and shall be supplied from a Power Supply having double / reinforced insulation. A power switch shall be easily accessible and close to the device. The power switch shall be marked as the disconnecting unit for the device.

For installation on Power Rail 9400 the power is supplied by Power Control Unit 9410.

Year of manufacture can be taken from the first two digits in the serial number.

CALIBRATION AND ADJUSTMENT
During calibration and adjustment, the measuring and connection of external voltages must be carried out according to the specifications of this manual. The technician must use tools and instruments that are safe to use.
NORMAL OPERATION
Operators are only allowed to adjust and operate devices that are safely fixed in panels, etc., thus avoiding the danger of personal injury and damage. This means there is no electrical shock hazard, and the device is easily accessible.

CLEANING
When disconnected, the device may be cleaned with a cloth moistened with distilled water.

LIABILITY
To the extent that the instructions in this manual are not strictly observed, the customer cannot advance a demand against PR electronics A/S that would otherwise exist according to the concluded sales agreement.

HOW TO DEMOUNT SYSTEM 9000

Picture 1:
By lifting the bottom lock, the device is detached from the DIN rail.
HART® TRANSPARENT REPEATER
9106B

- 24 VDC supply via power rail or connectors
- Active and passive mA input
- Active or passive output via the same two terminals
- Splitter function - 1 in and 2 out
- SIL2/SIL3 Full Assessment and certified acc. to IEC 61508

Application
- 9106B is a 1- or 2-channel isolated 1:1 repeater barrier for intrinsic safety applications.
- The device supplies 2-wire SMART transmitters and can also be used for 2-wire SMART current sources. HART & BRAIN protocols are supported and are transferred bi-directionally.
- 9106B can be mounted in the safe area or in zone 2 / Cl. 1, div. 2 and receive signals from zone 0, 1, 2 and zone 20, 21, 22 including mining / Class I/I/II, Div. 1, Gr. A-G.
- The PR 4501 displays the process value for each channel and can be used to define high and low limits for detection of loop current level. If these limits are exceeded, the status relay will activate.
- In the 1-channel version the status relay can be used as a simple limit switch.
- Ex splitter application - 1 input and 2 outputs.
- In the dual channel version the 9106B can be implemented in a SIL3 loop.

Advanced features
- The PR 4501 detachable display and the green and red front LEDs indicate operation status for each channel.
- A tag number can be defined for each channel.
- Monitoring of error events and cable breakage on input via the individual status relay and/or a collective electronic signal via the power rail.

Technical characteristics
- High galvanic isolation of 2.6 kVAC.
- Fast response time <5 msec.
- High accuracy better than 0.1%.
- 2-wire transmitter supply >16 V.
**Applications**

**Input signals:**

Channel 1

- 2-wire transmitter
- Current

Channel 2

- 2-wire transmitter
- Current

**Output signals:**

- Analogue, 4...20 mA
  - Channel 1

**Power rail**

- Status relay signal
- Rail, +24 VDC
- Rail, Gnd.
- No connection
- No connection

**Power connection:**

- Gnd.
- Supply +19.2...31.2 VDC
- Device status
  - N.C.
  - Device status

*Zone 0, 1, 2, 20, 21, 22, M1 & Cl. I/II/III, Div. 1 gr. A-G*

*Zone 2 & Cl. 1, Div. 2, gr. A-D or Safe Area*
PR 4501 DISPLAY / PROGRAMMING FRONT

Functionality
The simple and easily understandable menu structure and the explanatory help texts guide you effortlessly and automatically through the configuration steps, thus making the product very easy to use. Functions and configuration options are described in the section “Configuration / operating the function keys”.

Mounting / installation
• 4501 is a detachable display that can be mounted on the 9106B front for programming and signal monitoring.

Application
• Communications interface for modification of operational parameters in 9106B.
• When mounted in the process, the display shows process values and device status.

Technical characteristics
• LCD display with 4 lines:
  Line 1 (H=5.57 mm) shows status for each channel (OK or error).
  Line 2 (H=3.33 mm) shows loop current in mA for channel 1 or tag no.
  Line 3 (H=3.33 mm) shows loop current in mA for channel 2 or tag no.
  Line 4 shows communications status.
• In order to protect the configuration against unauthorised changes, access to the menus can be blocked by a password.
Environmental conditions:
Specifications range ............................................... -20°C to +60°C
Storage temperature .............................................. -20°C to +85°C
Calibration temperature ........................................ 20...28°C
Relative humidity .................................................... < 95% RH (non-cond.)
Protection degree .................................................... IP20
Installation in pollution degree 2 & overvoltage category II.

Mechanical specifications:
Dimensions (HxWxD) .............................................. 109 x 23.5 x 104 mm
Dimensions (HxWxD) w/ 4501 display ........... 109 x 23.5 x 116 mm
Weight approx .......................................................... 250 g
DIN rail type ............................................................... DIN EN 60715 - 35 mm
Wire size ...................................................................... 0.13...2.08 mm² / AWG 26...14 stranded wire
Screw terminal torque ........................................... 0.5 Nm

Common electrical specifications:
Supply voltage .......................................................... 19.2...31.2 VDC
Fuse ............................................................................... 1.25 A SB / 250 VAC
Max. consumption .................................................... ≤ 3 W (2 channels)
Max. internal power dissipation....................... ≤ 2 W (2 channels)

Order codes for 9106B:

<table>

Accessories:
4501 = Display / programming front
4511 = Modbus communication enabler
9400 = Power rail
9404 = Module stop for rail
9410 = Power control unit
9420 = Power supply 24 V / 120 W - Ex nAC
Isolation - test / working:
- Input to any: 2.6 kVAC / 300 VAC reinforced isolation
- Analogue output to supply: 2.6 kVAC / 300 VAC reinforced isolation
- Status relay to supply: 1.5 kVAC / 150 VAC reinforced isolation

SMART bi-directional communication:
- Frequency range: 0.5...7.5 kHz
- Signal / noise ratio: > 60 dB
- Response time (0...90%, 100...10%): < 5 msec
- Effect of supply voltage change on output (nom. 24 VDC): < ±10 µA

### Accuracy values

<table>
<thead>
<tr>
<th>Input</th>

</table>

EMC immunity influence: < ±0.5% of span

Extended EMC immunity:
- NAMUR NE 21, A criterion, burst: < ±1% of span

Current input:
- Measurement range: 3.5...23 mA
- 2-wire transmitter supply (terminal 44...43 and 54...53):
  - 9106B1x (U0=28 VDC): >16 V / 20 mA
  - 9106B2x (U0=25.6 VDC): >15 V / 20 mA

Sensor error detection:
- Loop break 4...20 mA: < 1 mA

Input voltage drop:
- Supplied unit: < 4 V @ 23 mA
- Non-supplied unit: < 6 V @ 23 mA

Ex barrier data:
- B1x: U0 = 28 V
  - Io = 93 mA
  - Po = 0.65 W

- B2x: U0 = 25.6 V
  - Io = 100 mA
  - Po = 0.64 W
**Current output:**
- Signal range: 3.5...23 mA
- Load (max.): 20 mA / 600 Ω / 12 VDC
- Load stability: ≤ 0.01% of span / 100 Ω
- Current limit: ≤ 28 mA

**Passive 2-wire output installation:**
- Max. external 2-wire supply: 26 VDC
- Max. load resistance [Ω]: \((V_{\text{supply}} - 3.5) / 0.023 \text{ A}\)
- Effect of external 2-wire supply voltage variation: < 0.005% of span / V

*of span = normal measurement range 4...20 mA

**Status relay output terminal 33-34:**
- Relay function: N.C.
- Programmable low setpoint: 0...29.9 mA
- Programmable high setpoint: 0...29.9 mA
- Hysteresis for setpoints: 0.1 mA
- Max. voltage: 110 VDC / 125 VAC
- Max. current: 0.3 ADC / 0.5 AAC
- Max. voltage - hazardous installation: 32 VDC / 32 VAC
- Max. current - hazardous installation: 1 ADC / 0.5 AAC

* All error indications in the display flash once per second. The help text explains the error. In case of cable fault the backlight also flashes. This can be reset by pressing the key.

Errors affecting both channels are shown as error on channel 1 - and the line showing channel 2 is blank.

Hardware error can be reset in two ways. Either step through the menus (if the other channel is to stay in operation) or power cycle the device.
HART communication is possible directly on the input and output terminals if the output load impedance is > 250 Ohm & < 600 Ohm.

CONFIGURATION / OPERATING THE FUNCTION KEYS

Documentation for routing diagram.

In general
When configuring the 9106B, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:
- will increase the numerical value or choose the next parameter
- will decrease the numerical value or choose the previous parameter
- will save the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0. Pressing and holding will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.

Further explanations
Password protection: Programming access can be blocked by assigning a password. The password is saved in the device in order to ensure a high degree of protection against unauthorised modifications to the configuration. Default password 2008 allows access to all configuration menus.

Loop limits
In the menus LO.LIM and HI.LIM you can choose the current values which will trigger a loop error alarm from the status relay. The NAMUR NE43 limits are selected by setting LO.LIM at 3.6 mA and HI.LIM at 21 mA. The selected limits are identical for both channels. This function can be deactivated by selecting limits outside the range 3.5...23 mA. Alternatively, the status relay can be used as a simple limit switch in the 1-channel version.

The loop break limit is fixed <= 1 mA. If this limit is exceeded, the status relay will be de-energized.
Signal and sensor error indication via display front 4501
Sensor error (loop break) is shown in line 1 on the display by flashing ‡ and §. The actual mA value is also shown followed by an explanatory text. Channel 1 is shown in line 2 and channel 2 is shown in line 3 on the display. Line 4 on the display shows the condition of the COM (flashing bullet) indicating correct functioning of 4501.

Advanced functions
The unit gives access to a number of advanced functions which can be reached by answering “Yes” to the point “adv.set”.

Display setup: Here you can adjust the brightness contrast and the backlight. Setup of tag numbers with 5 alphanumerics. Selection of functional readout in line 2 and 3 on the display - choose between readout of loop current or tag no. When selecting “ALT” the readout toggles between loop current and tag no.

Password: Here you can choose a password between 0000 and 9999 in order to protect the unit against unauthorised modifications to the configuration. The unit is delivered default without password.

Language: In the menu “LANG” you can choose between 7 different language versions of help texts that will appear in the menu. You can choose between UK, DE, FR, IT, ES, SE and DK.

Power rail: In the menu “RAIL” you can choose if a signal is transmitted to the central surveillance in the PR 9410 power control unit when the signal limits are exceeded.

### ROUTING DIAGRAM

If no key is activated for 1 minute, the display will return to the default state 1.0 without saving configuration changes.

- Increase value / choose next parameter
- Decrease value / choose previous parameter
- Save the chosen value and proceed to the next menu
- Hold • Back to previous menu / return to menu 1.0 without saving

**1.0 = Default state.**
- Line 1 shows status for channel 1 and channel 2
- Line 2 shows analogue value or tag no. for channel 1. If the loop limit is exceeded (LO.LIM and HI.LIM) the analogue value is shown for 5 sec. followed by txt 18. In case of loop break, 0.0 is shown for 5 sec. followed by txt 19.
- Line 3 shows the same as line 2, only for channel 2.
- Line 4 shows status for communication.

**1.1 = Only if password-protected.**

**1.2 = Loop current limits (identical for both channels) can be deactivated by selecting values outside the range 3.5...23 mA.**

**Line 1 symbols:**
- • = OK. Flashing • = error.

Safety Manual
IECEx Installation drawing

For safe installation of 9106B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area.

Year of manufacture can be taken from the first two digits in the serial number.

For Installation in Zone 2 the following must be observed.

The 4501 programming module is to be used solely with PR Electronics modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

9106B1A: 1 channel HART®-transparent repeater (28V Barrier)
9106B1B: 2 channel HART®-transparent repeater (28V Barrier)
9106B2A: 1 channel HART®-transparent repeater (25.6V Barrier)
9106B2B: 2 channel HART®-transparent repeater (25.6V Barrier)

Installation notes:
Install in pollution degree 2, overvoltage category II as defined in IEC 60664-1
Do not separate connectors when energized and an explosive gas mixture is present.
Do not mount or remove modules from the Power Rail when an explosive gas mixture is present.
Disconnect power before servicing.
The wiring of unused terminals is not allowed.
The Loop Supply and Current Input terminals for the same channel shall not be applied at the same time.

In type of protection [Ex ia Da] the parameters for intrinsic safety for gas group IIB are applicable.

For installation in Zone 2, the module shall be installed in an enclosure in type of protection Ex n or Ex e, providing a degree of protection of at least IP54. Cable entry devices and blanking elements shall fulfill the same requirements.

For installation on Power Rail in Zone 2, only Power Rail type 9400 supplied by Power Control Unit type 9410 (Type Examination Certificate KEMA 07ATEX0152 X) is allowed.

ATEX Installation drawing

For safe installation of 9106B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area. Year of manufacture can be taken from the first two digits in the serial number.

4501
For Installation in Zone 2 the following must be observed. The 4501 programming module is to be used solely with PRelectronics modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

FM Installation drawing

For safe installation of 9106B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area.

Year of manufacture can be taken from the first two digits in the serial number.

For Installation in Div2/Zone2 the following must be observed.
The 4501 programming module is to be used solely with PR-electronics modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

9106B1A: 1 channel HART®-transparent repeater (28 V Barrier)

9106B2A: 1 channel HART®-transparent repeater (25.6 V Barrier)
9106B2B: 2 channel HART®-transparent repeater (25.6 V Barrier)

Supply terminal (31,32)
Voltage: 19.2 – 31.2VDC

Status Relay terminal (33,34)
Voltage max: 125 VAC / 110 VDC
Power max: 62.5 VA / 32 W
Current max: 0.5 A AC / 0.3 ADC

Zone 2 installation
Voltage max: 32 VAC / 32 VDC
Power max: 16 VA / 32 W
Current max: 0.5 A AC / 1 ADC

Installation notes:
In Class I, Division 2 installations, the subject equipment shall be mounted within a tool-secured enclosure which is capable of accepting one or more of the Class I, Division 2 wiring methods specified in the National Electrical Code (ANSI/NFPA 70) or Canadian Electrical Code (C22.1).

The equipment shall be installed in an enclosure with a minimum ingress protection rating of IP54 unless the apparatus is intended to be afforded an equivalent degree of protection by location.

The module is galvanically isolated and does not require grounding.

Install in pollution degree 2, overvoltage category II.

Use 60 / 75 °C copper conductors with wire size AWG: (26-14)

Warning: Substitution of components may impair intrinsic safety.

Warning: To prevent ignition of the explosive atmospheres, disconnect power before servicing and do not separate connectors, install or remove module from Power Rail when energized and an explosive gas mixture is present.

Warning: The Loop Supply and Current Input terminals for the same channel shall not be applied at the same time. The wiring of unused terminals is not allowed.

Para instalação segura do 9106B o manual seguinte deve ser observado. O módulo deve ser instalado somente por profissionais qualificados que estão familiarizados com as leis nacionais e internacionais, diretrizes e normas que se aplicam a esta área. Ano de fabricação pode ser obtido a partir dos dois primeiros dígitos do número de série.

Para a instalação na Zona 2 o seguinte deve ser observado. O módulo de programação de 4501, deve ser utilizado apenas com os módulos PR Electronics. É importante que o módulo esteja intacto e não tenha sido alterado ou modificado de qualquer maneira. Apenas os módulos 4501 livres de poeira e umidade devem ser instalados.

Notas de Instalação:
Instalação em grau de poluição 2, categoria de sobretensão II conforme definido no IEC 60664-1
Não separe conectores quando energizado ou quando uma mistura de gás explosivo estiver presente.
Não monte ou remova módulos do trilho de alimentação quando uma mistura explosiva de gás estiver presente.
Desligue a alimentação antes da manutenção.
A fiação de terminais sem uso não é permitida.
A fonte de Loop e terminais de entrada de corrente para o mesmo canal não deve ser aplicada ao mesmo tempo.
Em tipo de proteção [Ex ia Da] os parâmetros para a segurança intrínseca para grupo de gás IIB são aplicáveis.
Para a instalação em Zona 2, o módulo deve ser instalado em um invólucro certificado conforme as normas da série ABNT NBR IEC 60079 que proporcione um grau de proteção de pelo menos IP54. Dispositivos de entrada de cabo e elementos de vedação devem cumprir com os mesmos requisitos.
Para a instalação de trilho de energia na Zona 2, apenas o trilho de alimentação Rail 9400 fornecido pela Unidade de Controle de Potência 9410 é permitido.

1. Observed standards

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEC 61508</td>
<td>Functional Safety of electrical / electronic / programmable electronic safety-related systems</td>
</tr>
</tbody>
</table>

2. Acronyms and abbreviations

<table>
<thead>
<tr>
<th>Acronym / Abbreviation</th>
<th>Designation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Element</td>
<td></td>
<td>Term defined by IEC 61508 as “part of a subsystem comprising a single component or any group of components that performs one or more element safety functions”</td>
</tr>
<tr>
<td>PFD</td>
<td>Probability of Failure on Demand</td>
<td>This is the likelihood of dangerous safety function failures occurring on demand.</td>
</tr>
<tr>
<td>PFH</td>
<td>Probability of dangerous Failure per Hour</td>
<td>The term “Probability” is misleading, as IEC 61508 defines a Rate.</td>
</tr>
<tr>
<td>SFF</td>
<td>Safe Failure Fraction</td>
<td>Safe Failure Fraction summarises the fraction of failures which lead to a safe state and the fraction of failures which will be detected by diagnostic measures and lead to a defined safety action.</td>
</tr>
<tr>
<td>SIF</td>
<td>Safety Integrity Function</td>
<td>Function that provides fault detection (to ensure the necessary safety integrity for the safety functions)</td>
</tr>
<tr>
<td>SIL</td>
<td>Safety Integrity Level</td>
<td>The international standard IEC 61508 specifies four discrete safety integrity levels (SIL 1 to SIL 4). Each level corresponds to a specific probability range regarding the failure of a safety function.</td>
</tr>
</tbody>
</table>
3. Purpose of the product
HART transparent, galvanic isolation and repetition of passive and active 4...20 mA current signals from hazardous area to non-classified area.
The module can be mounted in non-classified area or in zone 2 / Div. 2 and receive current signals from zone 0, 1, 2, 20, 21, 22 and mines or Class I/II/III, Div. 1, Group. A-G.
Error events, including cable breakage, are monitored and signalled via the individual status relay and/or a collective electronic signal via the power rail.
The display and programming module 4501 can be used to show the actual process values, and alter the set point for high and low limit.
The 9106 has been designed, developed and certified for use in SIL applications according to the requirements of IEC 61508

4. Assumptions and restrictions for use of the product

4.1 Basic safety specifications
Operational temperature range ........... -20...+60°C
Storage temperature range ............... -20...+85°C
Power supply type........................ Double or reinforced
Supply voltage............................ 19.2...31.2 VDC
Loop supply 9106B1 ....................... 16V @ 20mA
Loop supply 9106B2 ....................... 15V @ 20mA
Max external output supply voltage..... 26 VDC
Mounting area............................. Class I, Zone 2/Division 2 or safe area
Mounting environment.................... Pollution degree 2, Overvoltage category II

4.2 Safety accuracy
The analogue output corresponds to the applied input within the safety accuracy.
Safety accuracy.......................... ±2%

4.3 Analogue output
The connected safety PLC shall be able to detect and handle the fault indications from the analogue output of the 9106 Repeater by having a NAMUR NE43-compliant input circuit.

4.4. Failure rates
The basic failure rates from the Siemens standard SN 29500 are used as the failure rate database.
Failure rates are constant, wear-out mechanisms are not included.
External power supply failure rates are not included.
4.5 **Installation in hazardous areas**

The IECEx Installation drawing, ATEX Installation drawing and FM Installation drawing shall be followed if the products are installed in or connected to hazardous areas.

4.6. **Installation in SIL 3 applications**

The independence of the safety functions enables the use of the two channels in a 9106 HART® Transparent Repeater device, in a SIL 3 safety function when both inputs are connected in series.

The safety PLC or equivalent connected to the output shall be able to detect and handle the fault indications from both analogue outputs of the 9106 Repeater by having NAMUR NE43-compliant input circuits and must be able to compare the two channels.

5. **Functional specification of the safety functions**

Galvanic isolation of an active or passive 4...20 mA current signal from hazardous areas to an active or passive 4..20 mA output signal in non-classified area or zone2 / Div. 2, within the specified accuracy.

6. **Functional specification of the non-safety functions**

The status relay (terminal 33 and 34), error signal on power rail (terminal 91) and LED outputs are not suitable for use in any Safety Instrumented Function. The display value and any possible parameterisation by the 4501 add on module does not affect the safety function of the 9106.

Also the HART® transparency of the module is not a safety function.
7. **Safety parameters**

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Ex input SIL 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Connection diagram</td>
<td>Ex input SIL 2</td>
</tr>
<tr>
<td>Probability of dangerous Failure per Hour (PFH)</td>
<td>4.10E-08</td>
</tr>
<tr>
<td>Probability of failure on demand (PFD) - 1 year proof test interval</td>
<td>1.95E-04</td>
</tr>
<tr>
<td>Proof test interval (10% of loop PFD)</td>
<td>5 years</td>
</tr>
<tr>
<td>Safe Failure Fraction</td>
<td>88%</td>
</tr>
<tr>
<td>Demand mode</td>
<td>High</td>
</tr>
<tr>
<td>Demand rate</td>
<td>Note 3</td>
</tr>
<tr>
<td>Mean Time To Repair (MTTR)</td>
<td>24 hours</td>
</tr>
<tr>
<td>Hardware Fault Tolerance (HFT)</td>
<td>0</td>
</tr>
<tr>
<td>Component Type</td>
<td>A</td>
</tr>
<tr>
<td>SIL capability</td>
<td>SIL 2</td>
</tr>
<tr>
<td>Description of the “Safe State”</td>
<td>Output ≤ 3.6 mA or Output ≥ 21 mA</td>
</tr>
</tbody>
</table>
Note 1: The 9106 contains no lifetime limiting components, therefore the PFH figures are valid for up to 12 years, according to IEC 61508.

Note 2: The use of 9106 in SIL 3 applications requires that the connected PLC is suitable for SIL 3 applications. see paragraph 4.6.

Note 3: Depends on detection time in external controller. If detection time is xx seconds, the Demand Rate shall be 100 times xx seconds.

Note 4: Simple device (type A) where microprocessors and software have no effect on safety output.

8. **Hardware and software configuration.**

All configurations of software and hardware versions are fixed from factory, and cannot be changed by end-user or reseller.

This manual only covers products labelled with the product version (or range of versions) specified on the front page.
9. Failure category SIL 2 / SIL 3

<table>
<thead>
<tr>
<th>Failure category</th>
<th>Failure rates (1/h) SIL 2</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fail Safe Detected</td>
<td>0.000E-0</td>
</tr>
<tr>
<td>Fail Safe Undetected</td>
<td>1.65E-07</td>
</tr>
<tr>
<td>Fail Dangerous Detected</td>
<td>1.60E-07</td>
</tr>
<tr>
<td>Fail Dangerous Undetected</td>
<td>4.10E-08</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Failure category</th>
<th>Failure rates (1/h) SIL 3</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fail Safe Detected</td>
<td>0.000E-0</td>
</tr>
<tr>
<td>Fail Safe Undetected</td>
<td>3.05E-07</td>
</tr>
<tr>
<td>Fail Dangerous Detected</td>
<td>3.63E-07</td>
</tr>
<tr>
<td>Fail Dangerous Undetected</td>
<td>1.10E-08</td>
</tr>
</tbody>
</table>

10. Periodic proof test procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Bypass the safety PLC or take other appropriate action to avoid a false trip</td>
</tr>
<tr>
<td>2</td>
<td>Connect a simulator identical to the input setup</td>
</tr>
<tr>
<td>3</td>
<td>Apply input value corresponding to 0/100% output range to each channel</td>
</tr>
<tr>
<td>4</td>
<td>Observe whether the output channel acts as expected</td>
</tr>
<tr>
<td>5</td>
<td>Restore the input terminals to full operation</td>
</tr>
<tr>
<td>6</td>
<td>Remove the bypass from the safety PLC or otherwise restore normal operation</td>
</tr>
</tbody>
</table>

This test will detect approximately 95% of possible “du” (dangerous undetected) failures in the module.

11. Procedures to repair or replace the product

Any failures that are detected and that compromise functional safety should be reported to the sales department at PR electronics A/S.

Repair of the module and replacement of circuit breakers must be done by PR electronics A/S only.

12. Maintenance

No maintenance required.
13. Connections diagram

Ex inputs - SIL 2:

Channel 1

Ex inputs - SIL 3:

Outputs:

Channel 1
Displays  Programmable displays with a wide selection of inputs and outputs for display of temperature, volume and weight, etc. Feature linearisation, scaling, and difference measurement functions for programming via PReset software.

Ex interfaces  Interfaces for analogue and digital signals as well as HART® signals between sensors / I/P converters / frequency signals and control systems in Ex zone 0, 1 & 2 and for some modules in zone 20, 21 & 22.

Isolation  Galvanic isolators for analogue and digital signals as well as HART® signals. A wide product range with both loop-powered and universal isolators featuring linearisation, inversion, and scaling of output signals.

Temperature  A wide selection of transmitters for DIN form B mounting and DIN rail modules with analogue and digital bus communication ranging from application-specific to universal transmitters.

Universal  PC or front programmable modules with universal options for input, output and supply. This range offers a number of advanced features such as process calibration, linearisation and auto-diagnosis.
