9107
HART®
Transparent Driver

No. 9107V101-UK
Product version: 9107-002

Signals the best

PR electronics A/S offers a wide range of analogue and digital signal conditioning modules for industrial automation. The product range includes Isolators, Displays, Ex Interfaces, Temperature Transmitters, and Universal Devices. You can trust our products in the most extreme environments with electrical noise, vibrations and temperature fluctuations, and all products comply with the most exacting international standards. »Signals the Best« is the epitome of our philosophy – and your guarantee for quality.

PR electronics A/S offre une large gamme de produits pour le traitement des signaux analogiques et numériques dans tous les domaines industriels. La gamme de produits s’étend des transmetteurs de température aux afficheurs, des isolateurs aux interfaces SI, jusqu’aux modules universels. Vous pouvez compter sur nos produits même dans les conditions d’utilisation sévères, p.ex. bruit électrique, vibrations et fluctuations de température. Tous nos produits sont conformes aux normes internationales les plus strictes. Notre devise »SIGNALS the BEST« c’est notre ligne de conduite - et pour vous l’assurance de la meilleure qualité.

WARNING

The following operations should only be carried out on a disconnected device and under ESD-safe conditions:
- General mounting, connection and disconnection of wires.
- Troubleshooting the device.

Repair of the device and replacement of circuit breakers must be done by PR electronics A/S only.

WARNING

Do not open the front plate of the device as this will cause damage to the connector for the display / programming front PR 4501. This device contains no DIP-switches or jumpers.

Symbol Identification

Triangle with an exclamation mark: Read the manual before installation and commissioning of the device in order to avoid incidents that could lead to personal injury or mechanical damage.

The CE mark proves the compliance of the device with the essential requirements of the directives.

The double insulation symbol shows that the device is protected by double or reinforced insulation.

Ex devices have been approved according to the ATEX directive for use in connection with installations in explosive areas. See installation drawings in appendix.

Safety Instructions

Definitions

Hazardous voltages have been defined as the ranges: 75...1500 Volt DC, and 50...1000 Volt AC.
Technicians are qualified persons educated or trained to mount, operate, and also troubleshoot technically correct and in accordance with safety regulations. Operators, being familiar with the contents of this manual, adjust and operate the knobs or potentiometers during normal operation.
RECEIPT AND UNPACKING
Unpack the device without damaging it and check whether the device type corresponds to the one ordered. The packing should always follow the device until this has been permanently mounted.

ENVIRONMENT
Avoid direct sunlight, dust, high temperatures, mechanical vibrations and shock, as well as rain and heavy moisture. If necessary, heating in excess of the stated limits for ambient temperatures should be avoided by way of ventilation. The device must be installed in pollution degree 2 or better. The device is designed to be safe at least under an altitude up to 2 000 m.

MOUNTING
Only technicians who are familiar with the technical terms, warnings, and instructions in the manual and who are able to follow these should connect the device. Should there be any doubt as to the correct handling of the device, please contact your local distributor or, alternatively,

PR electronics A/S
www.prelectronics.com

The use of stranded wires is not permitted for mains wiring except when wires are fitted with cable ends.

Descriptions of input / output and supply connections are shown in the block diagram and on the side label.

The device is provided with field wiring terminals and shall be supplied from a Power Supply having double / reinforced insulation. A power switch shall be easily accessible and close to the device. The power switch shall be marked as the disconnecting unit for the device.

For installation on Power Rail 9400 the power is supplied by Power Control Unit 9410.

Year of manufacture can be taken from the first two digits in the serial number.

CALIBRATION AND ADJUSTMENT
During calibration and adjustment, the measuring and connection of external voltages must be carried out according to the specifications of this manual. The technician must use tools and instruments that are safe to use.
NORMAL OPERATION
Operators are only allowed to adjust and operate devices that are safely fixed in panels, etc., thus avoiding the danger of personal injury and damage. This means there is no electrical shock hazard, and the device is easily accessible.

CLEANING
When disconnected, the device may be cleaned with a cloth moistened with distilled water.

LIABILITY
To the extent that the instructions in this manual are not strictly observed, the customer cannot advance a demand against PR electronics A/S that would otherwise exist according to the concluded sales agreement.

HOW TO DEMOUNT SYSTEM 9000

Picture 1:
By lifting the bottom lock, the device is detached from the DIN rail.
EC DECLARATION OF CONFORMITY

As manufacturer

PR electronics A/S
Lerbakken 10
DK-8410 Rønde

hereby declares that the following product:

Type: 9107BA & 9107BB
Name: HART® transparent driver

is in conformity with the following directives and standards:
The EMC Directive 2004/108/EC and later amendments
EN 61326-1 : 2006
For specification of the acceptable EMC performance level, refer to the
electrical specifications for the device.
The Low Voltage Directive 2006/95/EC and later amendments
EN 61010-1 : 2001
The ATEX Directive 94/9/EC and later amendments
ATEX certificate: DEKRA 11ATEX0247 X

Notified body

DEKRA Certification B.V. (0344)
Utrechtseweg 310, 6812 AR Arnhem
P.O. Box 5185, 6802 ED Arnhem
The Netherlands

Rønde, 10 February 2012

Manufacturer's signature
HART®-TRANSPARENT DRIVER
9107B

• 24 VDC supply via power rail or connectors
• Fast response time <5 ms
• High active output load 725 Ohm / 20 mA
• Output line fault detection via status relay
• SIL2 certified via Full Assessment according to IEC 61508

Application
• 9107B is a 1- or 2-channel isolated 1:1 driver barrier for intrinsic safety applications.
• Operation and drive control of I/P converters, valves and indicators mounted in the hazardous area.
• Operation of HART devices is possible as the unit transmits HART communication signals bi-directionally.
• 9107B can be mounted in the safe area or in zone 2 / Cl. 1, div. 2 and transmit signals to zone 0, 1, 2 and zone 20, 21, 22 including mining / Class I/II/III, Div. 1, Gr. A-G.
• The PR 4501 displays the process value for each channel and can be used to define high and low limits for detection of loop current level. If these limits are exceeded, the status relay will activate.
• Dual channel versions can be used for signal splitter applications - 1 in and 2 out.

Advanced features
• The PR 4501 detachable display and the green and red front LEDs indicate operation status for each channel.
• A tag number can be defined for each channel.
• Output line fault detection.
• In the 1-channel version the status relay can be used as a simple limit switch.

Technical characteristics
• High galvanic isolation of 2.6 kVAC.
• High accuracy better than 0.1%.
• Continuous check of vital stored data for safety reasons.
**APPLICATIONS**

**Output signals:**

Channel 1

Current 4...20 mA

I/P converter

 mA

Input signals:

Channel 1

Analogue, 4...20 mA

Power rail

Status relay signal

Rail, +24 VDC

Rail, Gnd.

No connection

No connection

Power connection:

Same power rail as above

Zone 0, 1, 2, 20, 21, 22, M1 & Cl. I/II/III, Div. 1 gr. A-G

Zone 2 & Cl. 1, Div. 2, gr. A-D or Safe Area

**Input signals:**

Channel 1

Channel 2

Zone 2 & Cl. 1, Div. 2, gr. A-D or Safe Area
PR 4501 DISPLAY / PROGRAMMING FRONT

Functionality
The simple and easily understandable menu structure and the explanatory help texts guide you effortlessly and automatically through the configuration steps, thus making the product very easy to use. Functions and configuration options are described in the section "Configuration / operating the function keys”.

Mounting / installation
- 4501 is a detachable display that can be mounted on the 9107B front for programming and signal monitoring.

Application
- Communications interface for modification of operational parameters in 9107B.
- When mounted in the process, the display shows process values and device status.

Technical characteristics
- LCD display with 4 lines:
  Line 1 (H=5.57 mm) shows status for each channel - OK or error.
  Line 2 (H=3.33 mm) shows loop current in mA for channel 1 or tag no.
  Line 3 (H=3.33 mm) shows loop current in mA for channel 2 or tag no.
  Line 4 shows status for communication.
- Unauthorised changes in the programming menu can be blocked by a password.
Environmental conditions:
Specifications range .................................... -20°C to +60°C
Storage temperature ................................... -20°C to +85°C
Calibration temperature............................... 20...28°C
Relative humidity ........................................ < 95% RH (non-cond.)
Protection degree ........................................ IP20
Installation in pollution degree 2 & measurement / overvoltage category II.

Mechanical specifications:
Dimensions (HxWxD) ................................... 109 x 23.5 x 104 mm
Dimensions (HxWxD) w/ 4501 display ........ 109 x 23.5 x 116 mm
Weight approx. ............................................ 250 g
DIN rail type............................................. DIN EN 60715 - 35 mm
Wire size...................................................... 0.13...2.08 mm² /
                                       AWG 26...14 stranded wire
Screw terminal torque ......................... 0.5 Nm

Common electrical specifications:
Supply voltage............................................. 19.2...31.2 VDC
Fuse............................................................. 1.25 A SB / 250 VAC
Max. consumption........................................ ≤ 2 W (2 channels)
Max. internal power dissipation .............. ≤ 2 W (2 channels)
Isolation - test / working:
- Input to any................................. 2.6 kVAC / 300 VAC reinforced isolation
- Analogue output to supply........... 2.6 kVAC / 300 VAC reinforced isolation
- Status relay to supply .................. 1.5 kVAC / 150 VAC reinforced isolation

HART bi-directional communication frequency range............... 0.5...7.5 kHz
Signal / noise ratio .................................. > 60 dB
Response time (0...90%, 100...10%) ........ < 5 ms

Effect of supply voltage change on output (nom. 24 VDC) ............ < ±10 µA

| Accuracy values |
|-----------------|-----------------|-----------------|
| Input | Absolute accuracy | Temperature coefficient |
| mA | ≤ ±16 µA | ≤ ±1.6 µA / °C |

EMC immunity influence ........................................ < ±0.5% of span
Extended EMC immunity:
NAMUR NE 21, A criterion, burst ....................... < ±1% of span

**Current input:**
- Measurement range .................................. 3.5...23 mA
- Sensor error detection:
  - Loop break 4...20 mA........................... < 1 mA
- Input voltage drop:
  - Supplied unit.................................. < 2 V @ 23 mA
  - Non-supplied unit ............................. < 4 V @ 23 mA

**Ex barrier data:**
- \( U_0 \)................................................. 28 V
- \( I_0 \)............................................... 93 mA
- \( P_0 \)............................................... 0.65 W
**Current output:**

Signal range ................................................ 3.5...23 mA  
Load (max.) .................................................. 20 mA / 725 Ω / 14.5 VDC  
Load stability ............................................... ≤ 0.01% of span / 100 Ω  
Current limit ............................................... ≤ 28 mA

*of span = normal measurement range 4...20 mA

**Status relay output terminal 33-34:**

Relay function............................................... N.C.  
Programmable low setpoint ......................... 0...29.9 mA  
Programmable high setpoint ....................... 0...29.9 mA  
Hysteresis for setpoints.............................. 0.1 mA  
Max. voltage............................................... 110 VDC / 125 VAC  
Max. current .............................................. 0.3 ADC / 0.5 AAC  
Max. voltage - hazardous installation .......... 32 VDC / 32 VAC  
Max. current - hazardous installation.......... 1 ADC / 0.5 AAC
Approvals:
EMC 2004/108/EC ........................................ EN 61326-1
LVD 2006/95/EC ........................................ EN 61010-1
UL, Standard for Safety ............................. UL 61010-1

! All error indications in the display flash once per second. The help text explains the error. In case of cable fault the backlight also flashes. This can be reset by pressing the key.

Errors affecting both channels are shown as error on channel 1 - and the line showing channel 2 is blank.

Hardware error can be reset in two ways. Either step through the menus (if the other channel is to stay in operation) or power cycle the device.
HART communication is possible directly on the input and output terminals if the output impedance is > 250 Ohm & < 725 Ohm or if the input loop resistance is higher than 250 Ohm.
Channel 2 is identical to channel 1.

CONFIGURATION / OPERATING THE FUNCTION KEYS

Documentation for routing diagram.

In general
When configuring the 9107B, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:
- will increase the numerical value or choose the next parameter
- will decrease the numerical value or choose the previous parameter
- will save the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0. Pressing and holding will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.

Further explanations
Password protection: Programming access can be blocked by assigning a password. The password is saved in the module in order to ensure a high degree of protection against unauthorised modifications to the configuration. Default password 2008 allows access to all configuration menus.

Loop limits
In the menus LO.LIM and HI.LIM you can choose the current values which will trigger a loop error alarm from the status relay. The NAMUR NE43 limits are selected by setting LO.LIM at 3.6 mA and HI.LIM at 21 mA. This function can be deactivated by selecting limits outside the range 3.5...23 mA. Alternatively, the status relay can be used as a simple limit switch in the 1-channel version.

The loop break limit is fixed <= 1 mA. If this limit is exceeded, the status relay will be de-energized.
Signal and sensor error indication via display front 4501

Sensor error (loop break) is shown in line 1 on the display by flashing ș and ș. The actual mA value is also shown followed by an explanatory text. Channel 1 is shown in line 2 and channel 2 is shown in line 3 on the display.

Line 4 on the display shows the condition of the COM (flashing bullet) indicating correct functioning of 4501.

Advanced functions

The unit gives access to a number of advanced functions which can be reached by answering “Yes” to the point “adv.set”.

Display setup: Here you can adjust the brightness contrast and the backlight. Setup of tag numbers with 5 alphanumerics. Selection of functional readout in line 2 and 3 on the display - choose between readout of loop current or tag no. When selecting ”ALT“ the readout toggles between loop current and tag no.

Password: Here you can choose a password between 0000 and 9999 in order to protect the unit against unauthorised modifications to the configuration. The unit is delivered default without password.

Language: In the menu ”LANG” you can choose between 7 different language versions of help texts that will appear in the menu. You can choose between UK, DE, FR, IT, ES, SE and DK.

Power rail: In the menu ”RAIL” you can choose if a signal is transmitted to the central surveillance in the PR 9410 power control unit when the signal limits are exceeded.

 ROUTING DIAGRAM

If no key is activated for 1 minute, the display will return to the default state 1.0 without saving configuration changes.

Increase value / choose next parameter
Decrease value / choose previous parameter
Save the chosen value and proceed to the next menu
Hold Back to previous menu / return to menu 1.0 without saving

Power up

"Monitor"

1.0 = "Monitor", Default state.
Line 1 shows status for channel 1 and channel 2
Line 2 shows analogue value or tag no. for channel 1. If the loop limit is exceeded (LO.LIM and HI.LIM) the analogue value is shown for 5 sec. followed by txt 18. In case of loop break, 0.0 is shown for 5 sec. followed by txt 19.
Line 3 shows the same as line 2, only for channel 2.
Line 4 shows status for communication.

1.1 = Only if password-protected.
1.2 = Loop current limits (identical for both channels) can be deactivated by selecting values outside the range 3.5...23 mA.

Line 1 symbols:
\( ^{\wedge} \) = OK. Flashing \( ^{\wedge} \) = error.

IECEx Installation drawing

For safe installation of 9107B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area. Year of manufacture can be taken from the first two digits in the serial number.

For Installation in Zone 2 the following must be observed. The 4501 programming module is to be used solely with PRelectronics modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

9107
FM Installation drawing

For safe installation of 9107B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area.

Year of manufacture can be taken from the first two digits in the serial number.

For Installation in Zone 2 the following must be observed. The 4501 programming module is to be used solely with PRelectronics modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

9107BA: 1 channel HART®-transparent driver
9107BB: 2 channel HART®-transparent driver

Supply terminal (31,32)
Voltage: 19.2 – 31.2 VDC

Status Relay. terminal (33,34)
Voltage max: 125 VAC / 110 VDC
Power max: 62.5 VA / 32 W
Current max: 0.5 A AC / 0.3 ADC

Zone 2 installation:
Voltage max: 32 VAC / 32 VDC
Power max: 16 VA / 32 W
Current max: 0.5 A AC / 1 ADC

Installation notes:
In Class I, Division 2 installations, the subject equipment shall be mounted within a tool-secured enclosure which is capable of accepting one or more of the Class I, Division 2 wiring methods specified in the National Electrical Code (ANSI/NFPA 70) or Canadian Electrical Code (C22.1).

The equipment shall be installed in an enclosure with a minimum ingress protection rating of IP54 unless the apparatus is intended to be afforded an equivalent degree of protection by location. The module is galvanically isolated and does not require grounding.
Install in pollution degree 2, overvoltage category II.
Use 60 / 75 ºC copper conductors with wire size AWG: (26-14)
In type of protection "intrinsic safety iD" the parameters for intrinsic safety for gas group IIB are applicable.
Warning: Substitution of components may impair intrinsic safety.
Warning: To prevent ignition of the explosive atmospheres, disconnect power before servicing and do not separate connectors when energized and an explosive gas mixture is present.
Warning: Do not install or remove modules from the Power Rail when an explosive gas mixture is present.
**Hazardous Classified Location**

1. Observed standards

<table>
<thead>
<tr>
<th>Standard</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>IEC 61508</td>
<td>Functional Safety of electrical / electronic / programmable electronic safety-related systems</td>
</tr>
</tbody>
</table>

2. Acronyms and abbreviations

<table>
<thead>
<tr>
<th>Acronym / Abbreviation</th>
<th>Designation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Element</td>
<td>Term defined by IEC 61508 as “part of a subsystem comprising a single component or any group of components that performs one or more element safety functions”</td>
<td></td>
</tr>
<tr>
<td>PFD</td>
<td>Probability of Failure on Demand</td>
<td>This is the likelihood of dangerous safety function failures occurring on demand.</td>
</tr>
<tr>
<td>PFH</td>
<td>Probability of dangerous Failure per Hour</td>
<td>The term “Probability” is misleading, as IEC 61508 defines a Rate.</td>
</tr>
<tr>
<td>SFF</td>
<td>Safe Failure Fraction</td>
<td>Safe Failure Fraction summarises the fraction of failures which lead to a safe state and the fraction of failures which will be detected by diagnostic measures and lead to a defined safety action.</td>
</tr>
<tr>
<td>SIF</td>
<td>Safety Integrity Function</td>
<td>Function that provides fault detection (to ensure the necessary safety integrity for the safety functions)</td>
</tr>
<tr>
<td>SIL</td>
<td>Safety Integrity Level</td>
<td>The international standard IEC 61508 specifies four discrete safety integrity levels (SIL 1 to SIL 4). Each level corresponds to a specific probability range regarding the failure of a safety function.</td>
</tr>
</tbody>
</table>
3. Purpose of the product
HART Transparent, galvanic isolation of 4...20 mA current signals between hazardous area and non-classified area.
The module can be mounted in the safe area and in zone 2 / div. 2 and drive a 4...20 mA current signal into zone 0, 1, 2, 20, 21, 22 and mines / Class I/II/III, Div. 1, Group. A-G.
Error events, including cable breakage, are monitored and signalled via the individual status relay and/or a collective electronic signal via the power rail.
The display and programming module 4501 can be used to show the actual process value and alter the set point for high and low limit.
The 9107 has been designed, developed and certified for use in SIL 2 applications according to the requirements of IEC 61508.

4. Assumptions and restrictions for use of the product

4.1 Basic safety specifications
- Operational temperature range: -20...+60°C
- Storage temperature range: -20...+85°C
- Power supply type: Double or reinforced
- Supply voltage: 19.2...31.2 VDC
- Mounting area: Class I, Zone 2 / Division 2 or safe area
- Mounting environment: Pollution degree 2, Overvoltage category II

4.2 Safety accuracy
- The analogue output corresponds to the applied input within the safety accuracy.
  Safety accuracy: ±2%

4.3 Analogue output
- The connected safety Valve or other, or shall be able to detect and handle the fault indications from the analogue output of the 9107 Driver by having a NAMUR NE43-compliant input circuit.

4.4. Failure rates
- The basic failure rates from the Siemens standard SN 29500 are used as the failure rate database.
- Failure rates are constant, wear-out mechanisms are not included.
- External power supply failure rates are not included.
4.5 Installation in hazardous areas
The IECEx Installation drawing, ATEX Installation drawing and FM Installation drawing shall be followed if the module is installed in or connected to hazardous areas.

5. Functional specification of the safety functions
Galvanic isolation of 4...20 mA current signals, between hazardous area and non-classified area or zone 2 / Div. 2, within the specified accuracy.

6. Functional specification of the non-safety functions
The status relay (terminal 33 and 34), error signal on power rail (terminal 91) and LED outputs are not suitable for use in any Safety Instrumented Function. The display value and any possible parameterisation by the 4501 add on module does not affect the safety function of the 9107.
Also the HART® transparency of the module is not a safety function.

7. Safety parameters

<table>
<thead>
<tr>
<th>Parameter</th>
<th>Specification</th>
</tr>
</thead>
<tbody>
<tr>
<td>Probability of dangerous Failure per Hour (PFH)</td>
<td>4.80E-08</td>
</tr>
<tr>
<td>Probability of failure on demand (PFD) - 1 year proof test interval</td>
<td>2.29E-04</td>
</tr>
<tr>
<td>Proof test interval (10% of loop PFD)</td>
<td>5 years</td>
</tr>
<tr>
<td>Safe Failure Fraction</td>
<td>85%</td>
</tr>
<tr>
<td>Demand mode</td>
<td>High</td>
</tr>
<tr>
<td>Demand rate</td>
<td>Note²</td>
</tr>
<tr>
<td>Mean Time To Repair (MTTR)</td>
<td>24 hours</td>
</tr>
<tr>
<td>Hardware Fault Tolerance (HFT)</td>
<td>0</td>
</tr>
<tr>
<td>Component Type</td>
<td>A, see note³</td>
</tr>
<tr>
<td>SIL capability</td>
<td>SIL 2</td>
</tr>
<tr>
<td>Description of the “Safe State”</td>
<td>Output ≤ 3.6 mA or Output ≥ 21 mA</td>
</tr>
</tbody>
</table>

Note¹: The 9107 contains no lifetime limiting components, therefore the PFH figures are valid for up to 12 years, according to IEC 61508.
Note²: Depends on detection time in external controller. If detection time is xx seconds, the Demand Rate shall be 100 times xx seconds.
Note³: Simple device (type A) where microprocessors and software have no effect on safety output.
8. Hardware and software configuration.
All configurations of software and hardware versions are fixed from factory, and cannot be changed by end-user or reseller.
This manual only covers products labelled with the product version (or range of versions) specified on the front page.

9. Failure category

<table>
<thead>
<tr>
<th>Failure category</th>
<th>Failure rates (1/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fail Safe Detected</td>
<td>0.000E-0</td>
</tr>
<tr>
<td>Fail Safe Undetected</td>
<td>1.64E-07</td>
</tr>
<tr>
<td>Fail Dangerous Detected</td>
<td>1.27E-07</td>
</tr>
<tr>
<td>Fail Dangerous Undetected</td>
<td>4.80E-08</td>
</tr>
</tbody>
</table>

10. Periodic proof test procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Bypass the safety Valve or other and take other appropriate action to avoid a false trip</td>
</tr>
<tr>
<td>2</td>
<td>Connect a simulator identical to the input setup.</td>
</tr>
<tr>
<td>3</td>
<td>Apply input value corresponding to 0/100% output range to each channel</td>
</tr>
<tr>
<td>4</td>
<td>Observe whether the output acts as expected</td>
</tr>
<tr>
<td>5</td>
<td>Restore the input / output terminals to full operation</td>
</tr>
<tr>
<td>6</td>
<td>Remove the bypass from the safety Valve or other and restore normal operation</td>
</tr>
</tbody>
</table>

This test will detect approximately 95% of possible “du” (dangerous undetected) failures in the module.

11. Procedures to repair or replace the product

Any failures that are detected and that compromise functional safety should be reported to the sales department at PR electronics A/S.
Repair of the module and replacement of circuit breakers must be done by PR electronics A/S only.

12. Maintenance

No maintenance required.

Displays  Programmable displays with a wide selection of inputs and outputs for display of temperature, volume and weight, etc. Feature linearisation, scaling, and difference measurement functions for programming via PReset software.

Ex interfaces  Interfaces for analogue and digital signals as well as HART® signals between sensors/ I/P converters/ frequency signals and control systems in Ex zone 0, 1 & 2 and for some modules in zone 20, 21 & 22.

Isolation  Galvanic isolators for analogue and digital signals as well as HART® signals. A wide product range with both loop-powered and universal isolators featuring linearisation, inversion, and scaling of output signals.

Temperature  A wide selection of transmitters for DIN form B mounting and DIN rail modules with analogue and digital bus communication ranging from application-specific to universal transmitters.

Universal  PC or front programmable modules with universal options for input, output and supply. This range offers a number of advanced features such as process calibration, linearisation and auto-diagnosis.
