9113

Temperature / mA Converter

No. 9113V106-UK
Product version: 9113-004

PR electronics A/S offers a wide range of analog and digital signal conditioning devices for industrial automation. The product range includes Isolators, Displays, I.S. Interfaces, Temperature Transmitters, and Universal Devices. You can trust our products in the most extreme environments with electrical noise, vibrations and temperature fluctuations, and all products comply with the most exacting international standards. »Signals the Best« is the epitome of our philosophy - and your guarantee for quality.

PR electronics A/S offre une large gamme de produits pour le traitement des signaux analogiques et numériques dans tous les domaines industriels. La gamme de produits s’étend des transmetteurs de température aux afficheurs, des isolateurs aux interfaces SI, jusqu’aux modules universels. Vous pouvez compter sur nos produits même dans les conditions d’utilisation sévères, p.ex. bruit électrique, vibrations et fluctuations de température. Tous nos produits sont conformes aux normes internationales les plus strictes. Notre devise »SIGNALS the BEST« c’est notre ligne de conduite - et pour vous l’assurance de la meilleure qualité.

TEMPERATURE / mA CONVERTER

  Safety Manual ......................................................................................................................... 39
**WARNING**

The following operations should only be carried out on a disconnected device and under ESD-safe conditions:
- General mounting, connection and disconnection of wires.
- Troubleshooting the device.

**WARNING**

Do not open the front plate of the device as this will cause damage to the connector for the display / programming front PR 4501. This device contains no DIP-switches or jumpers.

**SYMBOL IDENTIFICATION**

- **Triangle with an exclamation mark**: Read the manual before installation and commissioning of the device in order to avoid incidents that could lead to personal injury or mechanical damage.

- **The CE mark**: Proves the compliance of the device with the essential requirements of the directives.

- **The double insulation symbol**: Shows that the device is protected by double or reinforced insulation.

- **Ex devices**: Have been approved according to the ATEX directive for use in connection with installations in explosive areas.

**SAFETY INSTRUCTIONS**

**DEFINITIONS**

**Hazardous voltages** have been defined as the ranges: 75...1500 Volt DC, and 50...1000 Volt AC.

**Technicians** are qualified persons educated or trained to mount, operate, and also troubleshoot technically correct and in accordance with safety regulations.

**Operators**, being familiar with the contents of this manual, adjust and operate the knobs or potentiometers during normal operation.
RECEIPT AND UNPACKING
Unpack the device without damaging it. The packing should always follow the device until this has been permanently mounted. Check at the receipt of the device whether the type corresponds to the one ordered.

ENVIRONMENT
Avoid direct sunlight, dust, high temperatures, mechanical vibrations and shock, as well as rain and heavy moisture. If necessary, heating in excess of the stated limits for ambient temperatures should be avoided by way of ventilation. The device must be installed in pollution degree 2 or better. The device is designed to be safe at least under an altitude up to 2 000 m.

MOUNTING
Only technicians who are familiar with the technical terms, warnings, and instructions in the manual and who are able to follow these should connect the device. Should there be any doubt as to the correct handling of the device, please contact your local distributor or, alternatively,

PR electronics A/S
www.prelectronics.com

The use of stranded wires is not permitted for mains wiring except when wires are fitted with cable ends.

Descriptions of input / output and supply connections are shown in the block diagram and on the side label.

The device is provided with field wiring terminals and shall be supplied from a Power Supply having double / reinforced insulation. A power switch shall be easily accessible and close to the device. The power switch shall be marked as the disconnecting device for the device.

For installation on Power Rail 9400 the power is supplied by Power Control module 9410.

Year of manufacture can be taken from the first two digits in the serial number.

CALIBRATION AND ADJUSTMENT
During calibration and adjustment, the measuring and connection of external voltages must be carried out according to the specifications of this manual. The technician must use tools and instruments that are safe to use.
NORMAL OPERATION
Operators are only allowed to adjust and operate device that are safely fixed in panels, etc., thus avoiding the danger of personal injury and damage. This means there is no electrical shock hazard, and the device is easily accessible.

CLEANING
When disconnected, the device may be cleaned with a cloth moistened with distilled water.

LIABILITY
To the extent the instructions in this manual are not strictly observed, the customer cannot advance a demand against PR electronics A/S that would otherwise exist according to the concluded sales agreement.

HOW TO DEMOUNT SYSTEM 9000

Picture 1:
By lifting the bottom lock, the device is detached from the DIN rail.
TEMPERATURE / mA CONVERTER
9113

• Input for RTD, TC and mA
• Active / passive mA output
• 1 or 2 channels
• Can be supplied separately or installed on power rail, PR type 9400
• SIL 2-certified via Full Assessment

Advanced features
• Configuration and monitoring by way of detachable display front (PR 4501); process calibration and signal simulation.
• Copying of the configuration from one device to others of the same type via the display front.
• TC inputs can use either the internal CJC or a terminal with a built-in Pt100 sensor (PR 5910Ex, channel 1 / PR 5913Ex, channel 2) for higher accuracy.
• The device automatically detects whether it must supply an active or a passive current signal.
• Advanced monitoring of internal communication and stored data.
• SIL 2 functionality is optional and must be activated in a menu point.

Application
• The device can be mounted in the safe area and in zone 2 / cl. 1 div. 2 and receive signals from zone 0, 1, 2 and zone 20, 21, 22 including M1 / Class I/II/III, Div. 1, Gr. A-G.
• Conversion and scaling of temperature (Pt, Ni and TC) and active current signals.
• The 9113 has been designed, developed and certified for use in SIL 2 applications according to the requirements of IEC 61508.

Technical characteristics
• 1 green and 2 red front LEDs indicate operation status and malfunction.
• 2.6 kVAC galvanic isolation between input, output and supply.
**Input signals:**

**Channel 1:**
- Current
  - TC
  - RTD Connection, wires

*Order separately: CJC connector 5910Ex/5913Ex

**Channel 2:**
- Current
  - TC
  - RTD Connection, wires

*Order separately: CJC connector 5910Ex/5913Ex

**Zone 0, 1, 2, 20, 21, 22, M1 & Cl. I/II/III, Div. 1 gr. A-G**

**Output signals:**

**Analogue, 0/4...20 mA**

**Power connection:**

- Gnd.
- Supply +19.2...31.2 VDC
- Device status
- Device status

**Zone 2 / Cl. 1, div. 2, gr. A-D or safe area**
PR 4501 DISPLAY / PROGRAMMING FRONT

Functionality

The simple and easily understandable menu structure and the explanatory help texts guide you effortlessly and automatically through the configuration steps, thus making the product very easy to use. Functions and configuration options are described in the section “Configuration / operating the function keys”.

Application

• Communications interface for modification of operational parameters in 9113.
• Can be moved from one 9113 device to another and download the configuration of the first unit to subsequent units.
• When mounted in the process, the display shows process values and device status.

Technical characteristics

• LCD display with 4 lines; Line 1 (H=5.57 mm) shows input status, line 2 and 3 (H=3.33 mm) show analogue input / output value or TAG no. and units, and line 4 shows status for communication and whether the device is SIL-locked. Static dot = SIL-locked and flashing dot = not SIL-locked.
• Programming access can be blocked by assigning a password. The password is saved in the device in order to ensure a high degree of protection against unauthorised modifications to the configuration.
MOUNTING / DEMOUNTING THE PR 4501/4511

1: Insert the taps of 4501/4511 into the holes at the top of the device.
2: Swing 4501/4511 into place.

Demounting of 4501/4511

3: Push the release button on the bottom of 4501/4511 and swing 4501/4511 up

*De-energized* indicates the relay is in its default state (not energized and closed).
CONFIGURATION / OPERATING THE FUNCTION KEYS

Documentation for routing diagram.

In general
When configuring the 9113, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:

1 will increase the numerical value or choose the next parameter
2 will decrease the numerical value or choose the previous parameter
3 will accept the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0.

Pressing and holding 3 will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.

Further explanations

Password protection: Programming access can be blocked by assigning a password. The password is saved in the converter in order to ensure a high degree of protection against unauthorised modifications to the configuration. Default password 2008 allows access to all configuration menus.

Selection of units
By selection of temperature input you can choose which process units should be shown in the display (see table). The process value is always displayed in Celsius or Fahrenheit. This is selected in the menu point after selection of temperature input.

CJC
In the CJC menu you can choose between CJC connector and internal cold junction compensation. The CJC connecter (PR 5910Ex/PR 5913Ex) must be ordered separately.
Signal and sensor error information via display front 4501

Sensor error (see limits in the table) is displayed as SE.BR (sensor break) or SE.SH (sensor short). Signals outside the selected range (not sensor error, see table for limits) are displayed as IN.LO indicating low input signal or IN.HI indicating high input signal. The error indication is displayed as text in line 2 for channel 1 and line 3 for channel 2 and at the same time the backlight flashes. Line 4 of the display is a status line which shows whether the device is SIL-locked (static dot = SIL-locked and flashing dot = not SIL-locked) as well as status for communication COM (running circle) indicating correct functioning of 4501.

Signal and sensor error indication without display front

Status of the unit can also be read from the 3 LEDs in the front of the device.
   Green flashing LED indicates normal operation.
   No light in the green LED indicates lack of supply voltage or error in the device.
   Steady red LED indicates fatal error.
   Flashing red LED indicates sensor error.

Advanced functions

The unit gives access to a number of advanced functions which can be reached by answering “YES” to the point “ADV.SET”.

Display setup: Here you can adjust the brightness contrast and the backlight.
   Setup of TAG numbers with 5 alphanumerics. Selection of functional readout in line 2 and 3 of the display - choose between readout of analogue input, analogue output or tag no or alternating display.

Two-point process calibration: The device can be process-calibrated in 2 points to fit a given input signal. A low input signal (not necessarily 0%) is applied and the actual value is entered. Then a high signal (not necessarily 100%) is applied and the actual value is entered. If you accept to use the calibration, the device will work according to this new adjustment. If you later reject this menu point or choose another type of input signal the device will return to factory calibration.

Process simulation function: In the menu point “EN.SIM” it is possible to simulate an input signal by means of the arrow keys and thus control the output signal up or down. You must exit the menu by pressing ✖ (no time-out). The simulation function exits automatically, if the 4501 is detached.
**Password:** Here you can choose a pass word between 0000 and 9999 in order to protect the device against unauthorised modifications to the configuration. The device is delivered default without password.

**Language:** In the menu “lang.setup” you can choose between 7 different language versions of help texts that will appear in the menu. You can choose between UK, DE, FR, IT, ES, SE and DK.

**Power rail:** In the menu “RAIL” you can choose if sensor errors are transmitted to the central surveillance in the PR 9410 power control unit.

**Safety integrity level:** See Safety Manual for details.
If no key is activated for 1 minute, the display will return to the default state 1.0 without saving configuration changes.

- Increase value / choose next parameter
- Decrease value / choose previous parameter
- Accept the chosen value and proceed to the next menu

Hold ✗ Back to previous menu / return to menu 1.0 without saving

**Red text** signifies safety parameters in a SIL configuration. See safety manual for details.

**Continued on the page**

Routing diagram ADV.SET
Configuration of CH2 identical to CH1

To default state 1.0
2.0 In the submenu simulation (SIM) you must press ✗ to return to the default state 1.0.
SCROLLING HELP TEXTS IN DISPLAY LINE 3

[01] Set correct password
[02] Enter advanced setup menu?
[03] Select temperature input
[04] Select 0-20 mA input range
[05] Select TC sensor type
[06] Select Pt10 sensor type
[07] Select Ni50 sensor type
[08] Select TC-B sensor type
[09] Select 2-wire sensor connection
[11] Select Celsius as temperature unit
[12] Select 0-20 mA output range
[13] Select no error action - output undefined at error
[14] Set temperature for analogue output low
[15] Set temperature for analogue output high
[16] Enable Rail status signal output?
[17] Enter SIL setup
[18] Load saved configuration into 9113

Installation notes:

Install in pollution degree 2, overvoltage category II as defined in IEC60664-1

Do not separate connectors when energized and an explosive gas mixture is present.

Do not mount or remove modules from the Power Rail when an explosive gas mixture is present.

Disconnect power before servicing.

The wiring of unused terminals is not allowed.

In type of protection [Ex ia Da] the parameters for intrinsic safety for gas group IIB are applicable.

For installation in Zone 2, the module shall be installed in an enclosure in type of protection Ex n or Ex e, providing a degree of protection of at least IP54. Cable entry devices and blanking elements shall fulfill the same requirements.

For installation on Power Rail in Zone 2, only Power Rail type 9400 supplied by Power Control Unit type 9410 (Type Examination Certificate KEMA 07ATEX0152 X) is allowed.

Voltage max: 32 VAC / 32 VDC
Power max: 16 VA / 32 W
Current max: 0.5 A AC / 1 ADC

Installation notes:
The installation and wiring shall be in accordance with the Canadian Electrical Code for Canada and National Electrical Code NFPA 70, Article 500 or 505 for installation in USA.
The module must be supplied from a Power Supply having double or reinforced insulation.
The use of stranded wires is not permitted for mains wiring except when wires are fitted with cable ends.
For installation on the 9400 Power Rail the power must be supplied from Power Control Module Unit 9410.
Install in pollution degree 2, overvoltage category II.
The module must be installed in an enclosure suitable for the environment for which it is used.
For installation in Zone 2 or Division 2, the module must be installed in a suitable outer enclosure according to the regulations in the CEC for Canada or NEC for USA.
The module is galvanic isolated and does not require grounding.
Use 60 / 75 °C Copper Conductors with wire Size AWG: (26-14).
Warning: Substitution of components may impair intrinsic safety.
Warning: To prevent ignition of the explosive atmospheres, disconnect power before servicing and do not separate connectors when energized and an explosive gas mixture is present.
Warning: Do not mount or remove modules from the Power Rail when an explosive gas mixture is present.

INMETRO Desenhos para Instalação

Para instalação segura do 9113B o manual seguinte deve ser observado. O módulo deve ser instalado somente por profissionais qualificados que estão familiarizados com as leis nacionais e internacionais, diretrizes e normas que se aplicam a esta área.

Ano de fabricação pode ser obtido a partir dos dois primeiros dígitos do número de série.

4501

Para a instalação na Zona 2 o seguinte deve ser observado. O módulo de programação de 4501 deve ser utilizado apenas com os módulos PRelectronics. É importante que o módulo esteja intacto e não tenha sido alterado ou modificado de qualquer maneira.

Apenas os módulos 4501 livres de poeira e umidade devem ser instalados.

TRILHO DE ENERGIA
Notas de Instalação:

Instalação em grau de poluição 2, categoria de sobretensão II conforme definido no IEC 60664-1

Não separe conectores quando energizado ou quando uma mistura de gás explosivo estiver presente.

Não monte ou remova módulos do trilho de alimentação quando uma mistura explosiva de gás estiver presente.

Desligue a alimentação antes da manutenção.

A fiação de terminais sem uso não é permitida.

Para a instalação em Zona 2, o módulo deve ser instalado em um invólucro certificado conforme as normas da série ABNT NBR IEC 60079 que proporcione um grau de proteção de pelo menos IP54. Dispositivos de entrada de cabo e elementos de vedação devem cumprir com os mesmos requisitos.

Para a instalação de trilho de energia na Zona 2, apenas o trilho de alimentação Rail 9400 fornecido pela Unidade de Controle de Potência 9410 é permitido.

2 Acronyms and abbreviations

<table>
<thead>
<tr>
<th>Acronym / Abbreviation</th>
<th>Designation</th>
<th>Description</th>
</tr>
</thead>
<tbody>
<tr>
<td>Element</td>
<td></td>
<td>Term defined by IEC 61508 as “part of a subsystem comprising a single component or any group of components that performs one or more element safety functions”</td>
</tr>
<tr>
<td>PFD</td>
<td>Probability of Failure on Demand</td>
<td>This is the likelihood of dangerous safety function failures occurring on demand.</td>
</tr>
<tr>
<td>PFH</td>
<td>Probability of dangerous Failure per Hour</td>
<td>The term “Probability” is misleading, as IEC 61508 defines a Rate.</td>
</tr>
<tr>
<td>SFF</td>
<td>Safe Failure Fraction</td>
<td>Safe Failure Fraction summarises the fraction of failures which lead to a safe state and the fraction of failures which will be detected by diagnostic measures and lead to a defined safety action.</td>
</tr>
<tr>
<td>SIF</td>
<td>Safety Integrity Function</td>
<td>Function that provides fault detection (to ensure the necessary safety integrity for the safety functions)</td>
</tr>
<tr>
<td>SIL</td>
<td>Safety Integrity Level</td>
<td>The international standard IEC 61508 specifies four discrete safety integrity levels (SIL 1 to SIL 4). Each level corresponds to a specific probability range regarding the failure of a safety function.</td>
</tr>
</tbody>
</table>

3 Purpose of the product

Conversion and scaling of temperature (Pt, Ni and TC) and current signals from hazardous area. The device can be mounted in the safe area and in zone 2 / div. 2 and receive signals from zone 0, 1, 2, 20, 21 and 22 / Class I/II/III, Div. 1, Gr. A-G. Error events, including cable breakage, are monitored and signalled via the individual status relay and/or a collective electronic signal via the power rail.

The 9113 has been designed, developed and certified for use in SIL 2 applications according to the requirements of IEC 61508.
4 Assumptions and restrictions for use of the product

4.1 Basic safety specifications
- Operational temperature range: -20...+60°C
- Storage temperature range: -20...+85°C
- Power supply type, min.: Double or reinforced
- Supply voltage: 19.2...31.2 VDC
- External loop supply voltage: 5...26 VDC + external drop
- Mounting area: Zone 2 / Division 2 or safe area
- Mounting environment: Pollution degree 2 or better

4.2 Safety accuracy
- The analogue output corresponds to the applied input within the safety accuracy.
- Safety accuracy: ±2%

4.2.1 Minimum span
- For temperature measurements, the selected range (OUT.HI - OUT.LO) shall be larger or equal to the values below:

<table>
<thead>
<tr>
<th>Input type</th>
<th>Minimum span for safety accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pt100, Pt200, Pt1000</td>
<td>28°C</td>
</tr>
<tr>
<td>Pt500, Ni100, Ni120, Ni1000</td>
<td>43°C</td>
</tr>
<tr>
<td>Pt50, Pt400, Ni50</td>
<td>57°C</td>
</tr>
<tr>
<td>Pt250, Pt300</td>
<td>85°C</td>
</tr>
<tr>
<td>Pt20</td>
<td>142°C</td>
</tr>
<tr>
<td>Pt10</td>
<td>283°C</td>
</tr>
<tr>
<td>TC: E, J, K, L, N, T, U</td>
<td>91°C</td>
</tr>
</tbody>
</table>

4.2.2 Range limitations
- TC type B shall not be used below +400°C

4.3 Associated equipment

4.3.1 RTD sensor wiring
- If a 2-wire or a 3-wire connection for RTD is selected, the end user must ensure that the applied sensor wiring does not introduce failures exceeding the requirements for the safety application.
4.3.2 Sensor errors

If Sensor error detection is disabled, if current input range 0...20 mA is selected or if input type Pt10, Pt20, or Pt50 is selected, the end user must ensure that the applied sensor including wiring has a failure rate qualifying it for the safety application without sensor error detection enabled.
For Pt10, Pt20 and Pt50 input types, this only relates to short-circuited sensor detection.

4.3.3 Process calibration

If a process calibration is taken into SIL-mode operation, it is mandatory that the accuracy of the device (and sensor, if applicable) are tested by the end user after SIL-mode is entered, in addition to the normal functional test. Refer to section 14 - Safe parameterisation - user responsibility.

4.3.4 Analogue output

The connected safety PLC shall be able to detect and handle the fault indications on the analogue output of the 9113 converter by having a NAMUR NE43-compliant current input.

4.4 Failure rates

The basic failure rates from the Siemens standard SN 29500 are used as the failure rate database.
Failure rates are constant, wear-out mechanisms are not included.
External power supply failure rates are not included.

4.5 Safe parameterisation

The user is responsible for verifying the correctness of the configuration parameters. (See section 14 Safe parameterisation - user responsibility).
Manual override may not be used for safety applications.

4.6 Installation in hazardous areas

The IECEx Installation drawing, ATEX Installation drawing and FM Installation drawing shall be followed if the products are installed in hazardous areas.

5 Functional specification of the safety function

Conversion of current signals (0...20 mA or 4...20 mA), RTD sensor signals or thermocouple sensor signals from hazardous areas to a 4...20 mA current output signal, in two separately configurable channels, within specified accuracy.
For RTD sensors, cable resistances of up to 50 Ω per wire can be compensated if 3- or 4-wire connection is configured.
For thermocouple sensors, cold junction temperature errors can be compensated, either by an internally mounted temperature sensor, or by an accessory connector with a built-in temperature sensor. The selection of CJC measurement must be done and verified by the end user.

6 Functional specification of the non-safety functions

The status relay (terminal 33 and 34), error signal on power rail (terminal 91) and LED outputs are not suitable for use in any Safety Instrumented Function.
7 Safety parameters

<table>
<thead>
<tr>
<th>Parameter</th>

</tr>
<tr>
<td>Mean Time To Repair (MTTR)</td>
<td>24 hours</td>
</tr>
<tr>
<td>Diagnostic test interval</td>
<td>30 seconds</td>
</tr>
<tr>
<td>Hardware Fault Tolerance (HFT)</td>
<td>0</td>
</tr>
<tr>
<td>Component Type</td>
<td>B</td>
</tr>
<tr>
<td>SIL capability</td>
<td>SIL 2</td>
</tr>
<tr>
<td>Description of the “Safe State”</td>
<td>Output ≤ 3.6 mA or output ≥ 21 mA</td>
</tr>
</tbody>
</table>

Note1: The 9113 contains no lifetime limiting components, therefore the PFH figures are valid for up to 12 years, according to IEC 61508.

8 Hardware and software configuration

All configurations of software and hardware versions are fixed from factory, and cannot be changed by end-user or reseller.

This manual only covers products labelled with the product version (or range of versions) specified on the front page.

9 Failure category

<table>
<thead>
<tr>
<th>Failure category</th>
<th>Failure rates (1/h)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Fail Safe Detected</td>
<td>0.000E-0</td>
</tr>
<tr>
<td>Fail Safe Undetected</td>
<td>2.34E-7</td>
</tr>
<tr>
<td>Fail Dangerous Detected</td>
<td>3.67E-7</td>
</tr>
<tr>
<td>Fail Dangerous Undetected</td>
<td>6.10E-8</td>
</tr>
</tbody>
</table>
10 Periodic proof test procedure

<table>
<thead>
<tr>
<th>Step</th>
<th>Action</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>Bypass the safety PLC or take other appropriate action to avoid a false trip</td>
</tr>
<tr>
<td>2</td>
<td>Connect a simulator identical to the input setup</td>
</tr>
<tr>
<td>3</td>
<td>Apply input value corresponding to 0/100% output range to each channel</td>
</tr>
<tr>
<td>4</td>
<td>Observe whether the output channel acts as expected</td>
</tr>
<tr>
<td>5</td>
<td>Restore the input terminals to full operation</td>
</tr>
<tr>
<td>6</td>
<td>Remove the bypass from the safety PLC or otherwise restore normal operation</td>
</tr>
</tbody>
</table>

This test will detect approximately 95% of possible “du” (dangerous undetected) failures in the device. The proof test is equivalent to the functional test.

11 Procedures to repair or replace the product

Any failures that are detected and that compromise functional safety should be reported to the sales department at PR electronics A/S. Repair of the device and replacement of circuit breakers must be done by PR electronics A/S only.

12 Maintenance

No maintenance required.

13 Documentation for routing diagram

The routing diagram is shown in section 16.2.

13.1 In general

When configuring the 9113, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:

- will increase the numerical value or choose the next parameter
- will decrease the numerical value or choose the previous parameter
- will accept the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0. Pressing and holding will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.
13.2 Further explanations

13.2.1 Password protection
Access to the configuration can be blocked by assigning a password.
The password is saved in the device in order to ensure a high degree of
protection against unauthorised modifications to the configuration. Default
password 2008 allows access to all configuration menus.
Password protection is mandatory in SIL applications.

13.2.2 Sensor/cable fault information via display front 4501
When the function is enabled and supported by selected input type,
sensor or cable faults are displayed as SE.BR (sensor break) or SE.SH
(cable short-circuited). Sensor fault is shown independently for each
channel.
In case of sensor or cable fault the backlight flashes. This can be reset by
pressing the key. When the sensor or cable fault has been remedied, the
device will return to normal operation.

13.3 Advanced functions
The device gives access to a number of advanced functions which can be reached
by answering “Yes” to the point “adv.set”.

13.3.1 Memory (MEM)
In the memory menu a non-SIL configuration can be either saved or loaded
from the local memory of the 4501 display unit. Choose SAVE to store the
current configuration in the 4501 memory. Press LOAD to read a previously
stored configuration in the 4501 memory and store it in the device. It is only
possible to load a configuration stored from the same type of device and
from the same version, or earlier.

13.3.2 Display setup (DISP)
The brightness contrast and the backlight can be adjusted.
Tag numbers with 5 alphanumerics can be entered for both channels.
Functional readout in line 2 (ch.1) and 3 (Ch.2) of the display can be
selected: choose between readout of input value, output current or tag no.
When selecting ”ALT” the readout alternates between input value, output
current and tag no.

13.3.3 Password (PASS)
Here you can choose a password between 0000 and 9999 in order to protect
the device against unauthorised modifications to the configuration. The device
is delivered default without password.

13.3.4 Language (LANG)
In this menu you can choose between 7 different language versions of
help texts that will appear in the menu. You can choose between UK, DE,
FR, IT, ES, SE and DK.
13.3.5 Process calibration (CAL)
A process calibration can be made by the end user. A known process signal must be applied for both low and high end of the input measurement range. The known input of the applied low end signal must be entered in the CAL.LO menu and confirmed by pressing OK before removing or changing the applied signal to the high end signal. The known input of the applied high end signal must be entered in the CAL.HI menu and confirmed by pressing OK before removing. It is possible to enable or disable the use of the latest process calibration.

13.3.6 Power rail (RAIL)
In this menu it can be chosen if errors in the device are transmitted to the central surveillance in the PR 9410 power control device.

13.3.7 Simulation (SIM)
It is possible to override the actual measured input signal by a simulated value. Only one channel can be simulated at a time. Leaving either of the simulation menus, or disconnecting the 4501 device, will disable the simulation mode and bring the output back to correspond to the actual measured value. Simulation is not possible in SIL-mode.

13.3.8 Safety integrity level (SIL)
See section 14 - Safe parameterisation - user responsibility
### 14 Safe parameterisation - user responsibility

#### 14.1 Safety-related configuration parameters

#### 14.1.1 Parameters related only to Channel 1

</table>
| OUT.ERR  | Fixed output value on detected sensor error:  
NONE = Sensor error detection NOT enabled, output at sensor error is undefined.  
The end user must ensure that the applied sensor including wiring has a failure rate qualifying it for the safety application without the detection enabled.  
0 mA = Output is 0 mA at sensor error  
3.5 mA = Output is 3.5 mA at sensor error (NE43 downscale)  
23 mA = Output is 23 mA at sensor error (NE4 upscale) |
| OUT.LO   | Selected temperature value for 0% output for CH1.TYP = TEMP in units defined by the UNIT parameter (°C or °F)  
Range is defined by the selected temperature sensor (SENSOR and TC.TYPE, Ni.TYPE or Pt.TYPE), but value must be less than OUT.HI - minimum span. |
| OUT.HI   | Selected temperature value for 100% output for CH1.TYP = TEMP in units defined by the UNIT parameter (°C or °F).  
Range is defined by the selected temperature sensor (SENSOR and TC.TYPE, Ni.TYPE or Pt.TYPE), but must be larger than OUT.LO + minimum span. |
| RESP     | Analogue output response time in seconds.  
Range is 0.0 to 60.0 seconds. |
| USE.CAL  | Use the applied process calibration values:  
NO = The last performed process calibration on Channel1 is not used. The channel operates with accuracy as specified.  
YES = The last performed process calibration on Channel1 is in operation. The required accuracy must be verified by user.  
End user must verify by test that the applied process calibration does not introduce failures exceeding the requirements for the safety application. |
14.1.2 Parameters related only to Channel 2 (only for type 9113BB)

<table>

</tr>
</tbody>
</table>

* Open is shown briefly in the display

14.2.3 If any parameter is found to be incorrect during verification
Remove SIL-mode (by entering the password and selecting SIL-mode OFF).
Go through the setup menu and correct the parameter(s).
Repeat step 1 to 38 (with correct parameters).

14.3 Functional test
The user is responsible to make a functional test after verification of the safety parameters. The procedure for periodic proof test described in section 10 shall be used.
In addition, if a process calibration is taken into SIL-mode operation (refer to section 13.3 - Advanced functions), it is mandatory that the accuracy of the device (and sensor, if applicable) are tested.

15 Fault reaction and restart condition
When the 9113 detects a fault the output will go to Safe State, in which the output will go to “de-energised”.
If the fault is application-specific (cable error detection) the 9113 will restart when the fault has been corrected.
For device faults there are 2 ways of bringing the device out of Safe State.
1. Power cycle the device.
2. Bring the device out of SIL mode (choose “NO” in the menu point ”EN.SIL”), and set it back to SIL mode again (choose “YES” in the menu point “EN.SIL” and verify the configuration).
16 User interface

16.1 Scrolling help texts in display line 3

[01] Set correct password
[02] Enter advanced setup menu?
[03] Select temperature input
  Select current input
[04] Select 0-20 mA input range
  Select 4-20 mA input range
[05] Select TC sensor type
  Select Ni sensor type
  Select Pt sensor type
[06] Select Pt10 sensor type
  Select Pt20 sensor type
  Select Pt50 sensor type
  Select Pt100 sensor type
[07] Select Ni50 sensor type
  Select Ni100 sensor type
  Select Ni120 sensor type
  Select Ni1000 sensor type
[08] Select TC-B sensor type
  Select TC-E sensor type
  Select TC-J sensor type
  Select TC-K sensor type
  Select TC-L sensor type
  Select TC-N sensor type
  Select TC-R sensor type
  Select TC-S sensor type
  Select TC-T sensor type
  Select TC-U sensor type
  Select TC-W3 sensor type
  Select TC-W5 sensor type
[09] Select 2-wire sensor connection
  Select 3-wire sensor connection
  Select 4-wire sensor connection
[11] Select Celsius as temperature unit
  Select Fahrenheit as temperature unit
[12] Select 0-20 mA output range
  Select 4-20 mA output range
  Select 20-0 mA output range
  Select 20-4 mA output range
[13] Select no error action - output undefined at error
  Select downscale at error
  Select NAMUR NE43 downscale at error
  Select NAMUR NE43 upscale at error
[14] Set temperature for analogue output low
[15] Set temperature for analogue output high
[16] Enable Rail status signal output?

[17] Enter SIL setup
[18] Load saved configuration into 9113
  Save 9113 configuration in 4501
[19] Adjust LCD contrast
[20] Adjust LCD backlight
[21] Write a 5-character channel TAG
[22] Show analogue input value in display
  Show analogue output value in display
  Show TAG in display
  Alternate shown information in display
[23] Enable password protection?
[24] Set new password
[25] Select language
[26] Select channel to calibrate
[27] Calibrate input low to process value?
[28] Set value for low calibration point
[29] Calibrate input high to process value?
[30] Set value for high calibration point
[31] Use process calibration values?
[32] Select channel to simulate
[33] Set the input simulation value
[34] Enable SIL configuration lock?
  0-20 mA is not a valid output range for SIL operation
[35] Set Analog output response time in seconds
[36] Select internal temperature sensor
  Select CJC connector (accessory)
[37] ...is channel using process-compensated calibration data?
[38] Configuration SIL status (Open / Locked)
[39] Sensor wire breakage
[40] Sensor short circuit
[41] Input underrange
[42] Input overrange
[43] Input error - check input connections and reset power
[44] Output error - check connections and reset power
[45] Flash memory error - check configuration
[46] Invalid configuration type or version
[47] Hardware error
[48] CJC sensor error - check device temperature
[49] CJC error - check CJC connector block
[50] No communication
16.2 Routing diagram

If no key is activated for 1 minute, the display will return to the default state 1.0 without saving configuration changes.

- Increase value / choose next parameter
- Decrease value / choose previous parameter
- Accept the chosen value and proceed to the next menu
- Hold Back to previous menu / return to menu 1.0 without saving

1.0 = Default state. Line 1 shows input status, line 2 and 3 show analogue input / output value or TAG No. and units, and line 4 shows status for communication and whether the device is SIL-locked. Static dot = SIL-locked and flashing dot = not SIL-locked.

1.1 = Only if password-protected.

1.2 = Not valid for 0...20 mA input signal.

1.3 = Only if input signal is temperature.

1.4 = Only if the configuration is not protected by a password.

Red text signifies safety parameters in a SIL configuration.

Configuration of CH2 identical to CH1

To default state 1.0
To default state 1.0

2.0 In the submenu simulation (SIM) you must press \( \text{OK} \) to return to the default state 1.0.

Verification of SIL configuration
17 Connections diagram

Inputs

Channel 1
- RTD, 2-wire
- RTD, 3- / 4-wire
- TC, internal
- CJC sensor

Channel 2
- RTD, 2-wire
- RTD, 3- / 4-wire
- TC, internal
- CJC sensor

Current

Channel 1
- 41 42 43 44

Channel 2
- 51 52 53 54

*Order separately: CJC connector 5910Ex (ch. 1) / 5913Ex (ch. 2).

Outputs

Channel 1
- Current
- 11 12 13 14

Channel 2
- Current
- 51 52 53 54

2-wire transmitter

*NC = no connection
**Displays** Programmable displays with a wide selection of inputs and outputs for display of temperature, volume and weight, etc. Feature linearization, scaling, and difference measurement functions for programming via PReset software.

**Ex interfaces** Interfaces for analog and digital signals as well as HART® signals between sensors / I/P converters / frequency signals and control systems in Ex zone 0, 1 & 2 and for some devices in zone 20, 21 & 22.

**Isolation** Galvanic isolators for analog and digital signals as well as HART® signals. A wide product range with both loop-powered and universal isolators featuring linearization, inversion, and scaling of output signals.

**Temperature** A wide selection of transmitters for DIN form B mounting and DIN rail devices with analog and digital bus communication ranging from application-specific to universal transmitters.

**Universal** PC or front programmable devices with universal options for input, output and supply. This range offers a number of advanced features such as process calibration, linearization and auto-diagnosis.
