9116
Universal converter

No. 9116V103-UK
Product version: 9116-003

SIGNS THE BEST
PR electronics A/S tilbyder et bredt program af analoge og digitale
signalbehandlingsmoduler til industriel automation. Programmet
består af Isolatorer, Displays, Ex-barrierer, Temperaturtransmittere,
Universaltransmittere mfl. Vi har modulerne, du kan stole på i selv
barske miljøer med elektrisk støj, vibrationer og temperaturud-
sving, og alle produkter opfylder de strengeste internationale stan-
darder. Vores motto »Signals the Best« er indbegrebet af denne
filosofi – og din garanti for kvalitet.

DK ▶ PR electronics A/S offers a wide range of analogue and digital
signal conditioning devices for industrial automation. The product
range includes Isolators, Displays, Ex Interfaces, Temperature
Transmitters, and Universal Devices. You can trust our products
in the most extreme environments with electrical noise, vibrations
and temperature fluctuations, and all products comply with the
most exacting international standards. »Signals the Best« is the
epitome of our philosophy – and your guarantee for quality.

UK ▶ PR electronics A/S offers a wide range of analogue and digital
signal conditioning devices for industrial automation. The product
range includes Isolators, Displays, Ex Interfaces, Temperature
Transmitters, and Universal Devices. You can trust our products
in the most extreme environments with electrical noise, vibrations
and temperature fluctuations, and all products comply with the
most exacting international standards. »Signals the Best« is the
epitome of our philosophy – and your guarantee for quality.

FR ▶ PR electronics A/S offre une large gamme de produits pour le
traitement des signaux analogiques et numériques dans tous
les domaines industriels. La gamme de produits s’étend des
transmetteurs de température aux afficheurs, des isolateurs aux
interfaces SI, jusqu’aux modules universels. Vous pouvez compter
sur nos produits même dans les conditions d’utilisation sévères,
p.ex. bruit électrique, vibrations et fluctuations de température.
Tous nos produits sont conformes aux normes internationales les
plus strictes. Notre devise »SIGNALS the BEST« c’est notre ligne
de conduite - et pour vous l’assurance de la meilleure qualité.

DE ▶ PR electronics A/S verfügt über ein breites Produktprogramm
an analogen und digitalen Signalverarbeitungsmodule für die in-
dustrielle Automatisierung. Dieses Programm umfasst Displays,
Temperaturtransmitter, Ex- und galvanische Signaltrenner, und
Universalgeräte. Sie können unsere Geräte auch unter extremen
Einsatzbedingungen wie elektrisches Rauschen, Erschütterungen
und Temperaturschwingungen vertrauen, und alle Produkte von
PR electronics werden in Übereinstimmung mit den strengsten
internationalen Normen produziert. »Signals the Best« ist Ihre
Garantie für Qualität!

**WARNING**

The following operations should only be carried out on a disconnected device and under ESD-safe conditions:
- General mounting, connection and disconnection of wires.
- Troubleshooting the device.

**Repair of the device and replacement of circuit breakers must be done by PR electronics A/S only.**

---

**WARNING**

Do not open the front plate of the device as this will cause damage to the connector for the display / programming front PR 4501. This device contains no DIP-switches or jumpers.

---

**SYMBOL IDENTIFICATION**

**Triangle with an exclamation mark:** Read the manual before installation and commissioning of the device in order to avoid incidents that could lead to personal injury or mechanical damage.

**The CE mark** proves the compliance of the device with the essential requirements of the directives.

**The double insulation symbol** shows that the device is protected by double or reinforced insulation.

**Ex devices** have been approved according to the ATEX directive for use in connection with installations in explosive areas. See installation drawings in appendix.

---

**SAFETY INSTRUCTIONS**

**DEFINITIONS**

**Hazardous voltages** have been defined as the ranges: 75...1500 Volt DC, and 50...1000 Volt AC.

**Technicians** are qualified persons educated or trained to mount, operate, and also troubleshoot technically correct and in accordance with safety regulations.

**Operators**, being familiar with the contents of this manual, adjust and operate the knobs or potentiometers during normal operation.
RECEIPT AND UNPACKING
Unpack the device without damaging it and check whether the device type corresponds to the one ordered. The packing should always follow the device until this has been permanently mounted.

ENVIRONMENT
Avoid direct sunlight, dust, high temperatures, mechanical vibrations and shock, as well as rain and heavy moisture. If necessary, heating in excess of the stated limits for ambient temperatures should be avoided by way of ventilation. The device must be installed in pollution degree 2 or better. The device is designed to be safe at least under an altitude up to 2,000 m.

MOUNTING
Only technicians who are familiar with the technical terms, warnings, and instructions in the manual and who are able to follow these should connect the device. Should there be any doubt as to the correct handling of the device, please contact your local distributor or, alternatively,

PR electronics A/S
www.prelectronics.com

The use of stranded wires is not permitted for mains wiring except when wires are fitted with cable ends.

Descriptions of input / output and supply connections are shown in the block diagram and on the side label.

The device is provided with field wiring terminals and shall be supplied from a Power Supply having double / reinforced insulation. A power switch shall be easily accessible and close to the device. The power switch shall be marked as the disconnecting unit for the device.

For installation on Power Rail 9400 the power is supplied by Power Control Unit 9410.

Year of manufacture can be taken from the first two digits in the serial number.

CALIBRATION AND ADJUSTMENT
During calibration and adjustment, the measuring and connection of external voltages must be carried out according to the specifications of this manual. The technician must use tools and instruments that are safe to use.
NORMAL OPERATION
Operators are only allowed to adjust and operate devices that are safely fixed in panels, etc., thus avoiding the danger of personal injury and damage. This means there is no electrical shock hazard, and the device is easily accessible.

CLEANING
When disconnected, the device may be cleaned with a cloth moistened with distilled water.

LIABILITY
To the extent the instructions in this manual are not strictly observed, the customer cannot advance a demand against PR electronics A/S that would otherwise exist according to the concluded sales agreement.

HOW TO DEMOUNT SYSTEM 9000

Picture 1:
By lifting the bottom lock, the device is detached from the power rail.
EC DECLARATION OF CONFORMITY

As manufacturer

PR electronics A/S
Lerbakken 10
DK-8410 Rønde

hereby declares that the following product:

Type: 9116
Name: Universal converter

is in conformity with the following directives and standards:
The EMC Directive 2004/108/EC and later amendments

EN 61326-1 : 2006

For specification of the acceptable EMC performance level, refer to the electrical specifications for the device.
The Low Voltage Directive 2006/95/EC and later amendments

EN 61010-1 : 2001

The ATEX Directive 94/9/EC and later amendments

EN 60079-0 : 2009, EN 60079-11 : 2012,

ATEX certificate: KEMA 10ATEX0053 X

Notified body

DEKRA Quality B.V. (0344)
Utrechtseweg 310, 6812 AR Arnhem
P.O. Box 5185, 6802 ED Arnhem

Rønde, 10 August 2012

Kim Rasmussen
Manufacturer's signature
UNIVERSAL CONVERTER
9116

- Input for RTD, TC, Ohm, potentiometer, mA and V
- Supply for 2-wire transmitters
- Active / passive mA output and relay output
- Can be supplied separately or installed on power rail, PR 9400
- SIL 2-certified via Full Assessment

Advanced features
- Configuration and monitoring by way of detachable display front (PR 4501); process calibration, signal and relay simulation.
- Advanced relay configuration, e.g. setpoint, window, delay, sensor error indication and power monitoring.
- Copying of the configuration from one device to others of the same type via PR4501.
- Reduced Uo Ex data < 8.3 V for active input signals.
- TC inputs with internal or external CJC for higher accuracy.
- The device automatically detects whether it must supply an active or a passive current signal.

Application
- The device can be mounted in the safe area and in zone 2 / cl. 1 div. 2 and receive signals from zone 0, 1, 2 and zone 20, 21, 22 including M1 / Class I/II/III, Div. 1, Gr. A-G.
- Conversion and scaling of temperature, voltage, potentiometer and linear resistance signals.
- Power supply and signal isolator for 2-wire transmitters.
- Monitoring of error events and cable breakage via the individual status relay and/or a collective electronic signal via the power rail.
- The 9116 has been designed, developed and certified for use in SIL 2 applications according to the requirements of IEC 61508.

Technical characteristics
- 1 green and 1 red front LED indicate operation status and malfunction. 1 yellow LED indicates relay status.
- 2.6 kVAC galvanic isolation between input, output and supply.
APPLICATIONS

Input signals:
- Potentiometer
- RTD and lin. R
- Connection, wires
- TC

Output signals:
- Analogue, 0/4...20 mA and relay

* Order separately: CJC connector 5910Ex

Power rail
- Status relay signal
- Rail, +24 VDC
- Rail, Gnd.
- No connection
- No connection

Power connection:
- Gnd.
- Supply +19.2...31.2 VDC
- Device status
- N.C.
- Device status

Zone 0, 1, 2, 20, 21, 22, M1 / Cl. I/II/III, div. 1 gr. A-G

Zone 2 / Cl. 1, div. 2, gr. A-D or safe area
Functionality
The simple and easily understandable menu structure and the explanatory help texts guide you effortlessly and automatically through the configuration steps, thus making the product very easy to use. Functions and configuration options are described in the section "Configuration / operating the function keys".

Application
- Communications interface for modification of operational parameters in 9116.
- Can be moved from one 9116 device to another and download the configuration of the first unit to subsequent units.
- Fixed display for visualisation of process data and status.

Technical characteristics
- LCD display with 4 lines; Line 1 (H=5.57 mm) shows input status, line 2 (H=3.33 mm) toggles between input value and tag. no. Line 3 (H=3.33 mm) shows output value and UNIT. Line 4 shows status for relay and communication and whether the device is SIL-locked. Static dot = SIL-locked and flashing dot = not SIL-locked.
- Programming access can be blocked by assigning a password. The password is saved in the device in order to ensure a high degree of protection against unauthorised modifications to the configuration.

Mounting / installation
- Click 4501 onto the front of 9116.
Electrical specifications
Specifications range.......................... -20°C to +60°C
Storage temperature............................ -20°C to +85°C

Common specifications:
Supply voltage, DC.......................... 19.2...31.2 VDC
Max. consumption............................... ≤ 3.5 W
Fuse............................................. 1.25 A SB / 250 VAC
Isolation - test / working:
  Input to any.................................. 2.6 kVAC / 300 VAC reinforced
  Analogue output to supply.................... 2.6 kVAC / 300 VAC reinforced
  Status relay to supply........................ 1.5 kVAC / 150 VAC reinforced
Communications interface.................... Programming front 4501
Signal / noise ratio........................... Min. 60 dB (0...100 kHz)
Response time (0...90%, 100...10%):
  Temperature input, programmable........... 1...60 s
  mA / V input, programmable.................. 0.4...60 s
Calibration temperature...................... 20...28°C
Accuracy, the greater of the general and basic values:

</table>
All error indications in the display flash once per second (1 Hz), and the corresponding help text is shown. If the error is a sensor error, the display backlight flashes as well - this is acknowledged (stopped) by pushing the OK button.

* Error is acknowledged by resetting the device power

** Error can be disregarded by selecting input type different than TC.

*** Error is acknowledged by stepping through the basic setup.
CONNECTIONS

Inputs:

- **RTD, 2-wire**
  - Connects with terminals 41, 42, 43, 44.

- **Resistance, 2-wire**
  - Connects with terminals 41, 42, 43, 44.

- **Resistance, 3- / 4-wire**
  - Connects with terminals 41, 42, 43, 44.

- **Potentiometer**
  - Connects with terminals 41, 42, 43, 44.

- **Current**
  - Connects with terminals 51, 52, 53, 54.

- **Voltage**
  - Connects with terminals 51, 52, 53, 54.

  - Connects with terminals 51, 52, 53, 54.

- **RTD, 3- / 4-wire**
  - Connects with terminals 41, 42, 43, 44.

- **TC, internal CJC sensor**
  - Connects with terminals 41, 42, 43, 44.

- **CJC connector**
  - Connects with terminals 41, 42.

*Order separately: CJC connector 5910Ex.*

Outputs:

- **Current** (Active output)
  - Connects with terminals 11, 12, 13, 14.

- **2-wire transmitter** (Passive output)
  - Connects with terminals 11, 12, 13, 14.

- **Relay**
  - Connects with terminals 11, 12, 13, 14.

**Configuration / Operating the Function Keys**

Documentation for routing diagram.

**In general**

When configuring the 9116, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:

- ![^]( ) will increase the numerical value or choose the next parameter
- ![▼]( ) will decrease the numerical value or choose the previous parameter
- ![OK]( ) will accept the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0.

Pressing and holding ![OK]( ) will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.

**Further explanations**

**Password protection:** Programming access can be blocked by assigning a password. The password is saved in the converter in order to ensure a high degree of protection against unauthorised modifications to the configuration. Default password 2008 allows access to all configuration menus. Password protection is mandatory in SIL applications.

**Selection of units**

After choosing the input signal type you can choose which process units should be shown in the display (see table). By selection of temperature input the process value is always displayed in Celsius or Fahrenheit. This is selected in the menu point after selection of temperature input.

**CJC**

In the CJC menu you can choose between CJC connector and internal cold junction compensation. The CJC connector (PR 5910Ex) must be ordered separately.
Signal and sensor error information via display front 4501

Sensor error (see limits in the table) is displayed as SE.BR (sensor break) or SE.SH (sensor short). Signals outside the selected range (not sensor error, see table for limits) are displayed as IN.LO indicating low input signal or IN.HI indicating high input signal. The error indication is displayed as text in line 1 and at the same time the backlight flashes. Line 4 of the display is a status line which shows whether the device is SIL-locked (static dot = SIL-locked and flashing dot = not SIL-locked) as well as relay status and COM (running circle) indicating correct functioning of 4501.

Signal and sensor error indication without display front

Status of the unit can also be read from the 3 LEDs in the front of the device. Green flashing LED indicates normal operation. No light in the green LED indicates lack of supply voltage or error in the device. Steady red LED indicates fatal error. Flashing red LED indicates sensor error.

Relay functions

5 different settings of relay function can be selected.

**Setpoint:** The unit works as a single trip amplifier

**Window:** The relay has a window that is defined by a low and a high setpoint. On both sides of the window the relay has the same status.

**Error function:** The relay is activated by sensor error.

**Power:** The relay is activated as long as the power is on.

**Off:** The relay is deactivated.

**Increasing/decreasing:** The relay can be set to activate at increasing or decreasing input signal.

**Delay:** An ON and an OFF delay can be set in the range 0...3600 s.

**Hysteresis:** A hysteresis can be set at 0.1...25% of the span or between 1 and 25% of display range.

**Window:** The window function is selected by choosing "window" in the menu and defining a high and a low setpoint.

See the graphic depiction of the window functions on page 30.

**Setpoint:** The setpoint function is selected by choosing "setpoint" in the menu and entering the desired limit. The device then works as a single limit switch. See the graphic depiction of the window functions on page 31.
An activated relay means that the contact is closed if the contact function "normally open" is selected, and the contact is open if the contact function "normally closed" is selected.

The delay time for activation and deactivation can be set independently of each other in the menus ON.DEL and OFF DEL respectively.

**Advanced functions**

The unit gives access to a number of advanced functions which can be reached by answering “Yes” to the point “adv.set”.

**Display setup:** Here you can adjust the brightness contrast and the backlight. Setup of TAG numbers with 5 alphanumerics. Input value is always shown in line 2. Selection of functional readout in line 3 of the display - choose between readout of analogue output or tag no or alternating display.

**Two-point process calibration:** The device can be process-calibrated in 2 points to fit a given input signal. A low input signal (not necessarily 0%) is applied and the actual value is entered via 4501. Then a high signal (not necessarily 100%) is applied and the actual value is entered via 4501. If you accept to use the calibration, the device will work according to this new adjustment. If you later reject this menu point or choose another type of input signal the device will return to factory calibration.

**Process simulation function:** In the menu point “EN.SIM” it is possible to simulate an input signal by means of the arrow keys and thus control the output signal up or down, or the relay state OFF and ON. You must exit the menu by pressing OK (no time-out). The simulation function exits automatically, if the 4501 is detached.

**Password:** Here you can choose a pass word between 0000 and 9999 in order to protect the device against unauthorised modifications to the configuration. The device is delivered default without password.

**Memory:** In the memory menu you can save the configuration of the device in the 4501, and then move the 4501 onto another device of the same type and download the configuration in the new device.
**Language:** In the menu “lang.setup” you can choose between 7 different language versions of help texts that will appear in the menu. You can choose between UK, DE, FR, IT, ES, SE and DK.

**Power rail:** In the menu ”RAIL” you can choose if sensor errors are transmitted to the central surveillance in the PR 9410 power control unit.

**Safety integrity level:** See Safety Manual for details

ROUTING DIAGRAM

If no key is activated for 1 minute, the display will return to the default state 1.0 without saving configuration changes.

Increase value / choose next parameter
Decrease value / choose previous parameter
Accept the chosen value and proceed to the next menu
Hold Back to previous menu / return to menu 1.0 without saving

1.0 = Default state. Line 1 shows input status. Line 2 shows input value and TAG NO. Line 3 shows output value and units. Line 4 shows status for relay and communication and whether the device is SIL-locked. Static dot = SIL-locked and flashing dot = not SIL-locked.

1.1 = Only if password-protected.
1.2 = Only if FastSet is activated and the relay function is setpoint.
1.3 = Only if input types support sensor error check.
1.4 = Only if input signal is temperature.
1.5 = Only if the configuration is not protected by a password.

IECEx Installation drawing

9116
For safe installation of 9116B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area. Year of manufacture can be taken from the first two digits in the serial number.

4501
For Installation in Zone 2 the following must be observed. The 4501 programming module is to be used solely with PR electronics modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

IECEx Certificate: KEM 10.0022X
Marking: [Ex ia Ga] IIC/II(B)/IIA
[Ex ia nA nC] IIIC
[Ex ia Ma] I

Standards
IEC60079-26:2006

(terminal 31,32,33,34)
(terminal 91,92,93,94,95)
U_{m} = 253 V; max. 400 Hz
### Installation notes:

For group I (mines), the parameters for group IIA apply.

Install in pollution degree 2, overvoltage category II as defined in IEC60664-1

Do not separate connectors when energized and an explosive gas mixture is present.

Do not mount or remove modules from the Power Rail when an explosive gas mixture is present.

Disconnect power before servicing.

The wiring of unused terminals is not allowed.

In type of protection [Ex ia Da] the parameters for intrinsic safety for gas group IIB are applicable.

For installation in Zone 2, the module shall be installed in an enclosure in type of protection Ex n or Ex e, providing a degree of protection of at least IP54. Cable entry devices and blanking elements shall fulfill the same requirements.

For installation on Power Rail in Zone 2, only Power Rail type 9400 supplied by Power Control Unit type 9410 (Type Examination Certificate KEMA 07ATEX0152 X) is allowed.

ATEX Installation drawing

9116
For safe installation of 9116B the following must be observed. The module shall only be installed by qualified personnel who are familiar with the national and international laws, directives and standards that apply to this area.

Year of manufacture can be taken from the first two digits in the serial number.

4501
For installation in Zone 2 the following must be observed. The 4501 programming module is to be used solely with PR electronics' modules. It is important that the module is undamaged and has not been altered or modified in any way. Only 4501 modules free of dust and moisture shall be installed.

ATEX Certificate: ........................................................................................... KEMA 10 ATEX 0053 X

Marking:

II (1) G [Ex ia Ga] IIC/IIB/IIA
II 3 G Ex nA nC IIC T4 Gc
II (1) D [Ex ia Da] IIIIC
I (M1) [Ex ia Ma] I

(terminal 31,32,33,34)
(terminal 91,92,93,94,95)
U_m: 253 V; max 400 Hz
Installation notes:

For group I (mines), the parameters for group IIA apply.

Install in pollution degree 2, overvoltage category II as defined in EN60664-1

Do not separate connectors when energized and an explosive gas mixture is present.
Do not mount or remove modules from the Power Rail when an explosive gas mixture is present.
Disconnect power before servicing.
The wiring of unused terminals is not allowed.

In type of protection [Ex ia Da] the parameters for intrinsic safety for gas group IIB are applicable.

For installation in Zone 2, the module shall be installed in an enclosure in type of protection Ex n or Ex e, providing a degree of protection of at least IP54. Cable entry devices and blanking elements shall fulfill the same requirements.

For installation on Power Rail in Zone 2, only Power Rail type 9400 supplied by Power Control Unit type 9410 (Type Examination Certificate KEMA 07ATEX0152 X) is allowed.

## Installation notes:

The installation and wiring shall be in accordance with the Canadian Electrical Code for Canada and National Electrical Code NFPA 70, Article 500 or 505 for installation in USA.

The module must be supplied from a Power Supply having double or reinforced insulation.

The use of stranded wires is not permitted for mains wiring except when wires are fitted with cable ends.

For installation on the 9400 Power Rail the power must be supplied from Power Control Module Unit 9410.

Install in pollution degree 2 or better, overvoltage category I or II.

The module must be installed in an enclosure suitable for the environment for which it is used.

In Class I, Division 2/Zone 2 installations, the subject equipment shall be mounted within a tool-secured enclosure which is capable of accepting one or more of the Class I, Division 2 wiring methods specified in the National Electrical Code for USA or the Canadian Electrical Code for Canada.

The module is galvanic isolated and does not require grounding.

Use 60 / 75 ºC Copper Conductors with wire Size AWG: (26-14).

**Warning**: Substitution of components may impair intrinsic safety.

**Warning**: To prevent ignition of the explosive atmospheres, disconnect power before servicing and do not separate connectors when energized and an explosive gas mixture is present.

**Warning**: Do not mount or remove modules from the Power Rail when an explosive gas mixture is present.

</tbody>
</table>

3 Purpose of the product

Conversion and scaling of temperature (Pt, Ni and TC), voltage, potentiometer, linear resistance and current signals from hazardous area.

The device can be mounted in the safe area and in zone 2 / div. 2 and receive signals from zone 0, 1, 2, 20, 21 and 22 / Class I/II/III, Div. 1, Gr. A-G.

Error events, including cable faults, are monitored and signalled via the individual status relay and/or a collective electronic signal via the power rail.

The 9116 has been designed, developed and certified for use in SIL 2 applications according to the requirements of IEC 61508.
4 Assumptions and restrictions for use of the product

4.1 Basic safety specifications
- Operational temperature range: -20...+60°C
- Storage temperature range: -20...+85°C
- Power supply type, min.: Double or reinforced
- Supply voltage: 19.2...31.2 VDC
- Relay output pulse length, min.: 70 ms
- Loop supply: >16.5 V @ 20 mA
- External loop supply voltage: 5...26 VDC + external drop
- Mounting area: Zone 2 / Division 2 or safe area
- Mounting environment: Pollution degree 2 or better

4.2 Safety accuracy
- The analogue output and relay output corresponds to the applied input within the safety accuracy.
  - Safety accuracy: ±2%

4.2.1 Minimum span
- For temperature measurements, the selected range (OUT.HI - OUT.LO), and for linear resistance measurements the selected range (R 100% - R 0%), shall be larger or equal to the values below:

<table>
<thead>
<tr>
<th>Input type</th>
<th>Minimum span for safety accuracy</th>
</tr>
</thead>
<tbody>
<tr>
<td>Pt100, Pt200, Pt1000</td>
<td>28°C</td>
</tr>
<tr>
<td>Pt500, Ni100, Ni120, Ni1000</td>
<td>43°C</td>
</tr>
<tr>
<td>Pt50, Pt400, Ni50</td>
<td>57°C</td>
</tr>
<tr>
<td>Pt250, Pt300</td>
<td>85°C</td>
</tr>
<tr>
<td>Pt20</td>
<td>142°C</td>
</tr>
<tr>
<td>Pt10</td>
<td>283°C</td>
</tr>
<tr>
<td>TC: E, J, K, L, N, T, U</td>
<td>91°C</td>
</tr>
<tr>
<td>Linear resistance, R 100% ≤ 800 Ω</td>
<td>53 Ω</td>
</tr>
<tr>
<td>Linear resistance, R 100% &gt; 800 Ω</td>
<td>667 Ω</td>
</tr>
</tbody>
</table>

4.2.2 Range limitations
- TC type B shall not be used below +400°C

4.3 Associated equipment

4.3.1 RTD or linear resistance sensor wiring
- If a 2-wire or a 3-wire connection for RTD or linear resistance is selected,
the end user must ensure that the applied sensor wiring does not introduce failures exceeding the requirements for the safety application.

4.3.2 Sensor errors
If the loop supply is used to supply a current input signal, the sensor error indication shall be enabled on the safety output(s).
If sensor error detection is disabled, or if any of the configurations below are used, the user must ensure that the applied sensor, including wiring, has a failure rate that qualifies it for the safety application without sensor error detection enabled:
- Input is current, 0-20 mA
- Input is voltage
- Input is linear resistance and $R_0 < 18 \Omega$ (no short circuit detection)
- Input is Pt10, Pt20 or Pt50 (no short circuit detection)
- Input is potentiometer (no short circuit detection on arm)

4.3.3 Process calibration
If a process calibration is taken into SIL-mode operation, it is mandatory that the accuracy of the device (and sensor, if applicable) are tested by the end user after SIL-mode is entered, in addition to the normal functional test. Refer to section 14 - Safe parameterisation - user responsibility.

4.3.4 Analogue output
The connected safety PLC shall be able to detect and handle the fault indications on the analogue output of the 9116 converter by having a NAMUR NE43-compliant current input.

4.3.5 Relay output
The relay output shall only be connected to equipment which has a current limiting function of 2 A.

4.4 Failure rates
The basic failure rates from the Siemens standard SN 29500 are used as the failure rate database.
Failure rates are constant, wear-out mechanisms are not included.
External power supply failure rates are not included.

4.5 Safe parameterisation
The user is responsible for verifying the correctness of the configuration parameters. (See section 14 Safe parameterisation - user responsibility).
Manual override may not be used for safety applications.

4.6 Installation in hazardous areas
The IECEx Installation drawing, ATEX Installation drawing and FM Installation drawing shall be followed if the products are installed in hazardous areas.

5 Functional specification of the safety function
Conversion of current signals (0...20 mA or 4...20 mA), voltage signals, potentiometer, linear resistance, RTD sensor signals or thermocouple sensor signals from hazardous areas to a 4...20 mA current output signal, and/or an output relay, within specified accuracy.
For RTD and linear resistance input sensors, cable resistances of up to 50 Ohm per wire can be compensated if 3- or 4-wire connection is configured.
For thermocouple sensors, cold junction temperature errors can be compensated, either by an internally mounted temperature sensor, or by an accessory connector with a built-in temperature sensor. The selection of CJC measurement must be done and verified by the end user.

6 Functional specification of the non-safety functions

The status relay (terminal 33 and 34), error signal on power rail (terminal 91) and LED outputs are not suitable for use in any Safety Instrumented Function.

<td>Description of the “Safe State”, relay output</td>
<td>Contact open (relay de-energized)</td>
</tr>
<tr>
<td>Relay lifetime (Note2)</td>
<td>100 000 times</td>
</tr>
</tbody>
</table>

Note1: The 9116 contains no lifetime limiting components, therefore the PFH figures are valid for up to 12 years, according to IEC 61508.

Note2: The user must calculate the product lifetime with regard to the relay lifetime.

### 8 Hardware and software configuration

All configurations of software and hardware versions are fixed from factory, and cannot be changed by end-user or reseller.

This manual only covers products labelled with the product version (or range of versions) specified on the front page.

</tr>
<tr>
<td>5</td>
<td>Restore the input terminals to full operation</td>
</tr>
<tr>
<td>6</td>
<td>Remove the bypass from the safety PLC or otherwise restore normal operation</td>
</tr>
</tbody>
</table>

This test will detect approximately 95% of possible “du” (dangerous undetected) failures in the device. The proof test is equivalent to the functional test.

11 Procedures to repair or replace the product

Any failures that are detected and that compromise functional safety should be reported to the sales department at PR electronics A/S. Repair of the device and replacement of circuit breakers must be done by PR electronics A/S only.

12 Maintenance

No maintenance required.

13 Documentation for routing diagram

The routing diagram is shown in section 16.2.

13.1 In general

When configuring the 9116, you will be guided through all parameters and you can choose the settings which fit the application. For each menu there is a scrolling help text which is automatically shown in line 3 on the display.

Configuration is carried out by use of the 3 function keys:

- will increase the numerical value or choose the next parameter
- will decrease the numerical value or choose the previous parameter
- will accept the chosen value and proceed to the next menu

When configuration is completed, the display will return to the default state 1.0. Pressing and holding will return to the previous menu or return to the default state (1.0) without saving the changed values or parameters.

If no key is activated for 1 minute, the display will return to the default state (1.0) without saving the changed values or parameters.

13.2 Further explanations

13.2.1 Password protection

Access to the configuration can be blocked by assigning a password. The password is saved in the device in order to ensure a high degree of protection against unauthorised modifications to the configuration. Default password 2008 allows access to all configuration menus. Password protection is mandatory in SIL applications.
13.2.2 Sensor/cable fault information via display front 4501
When the function is enabled and supported by selected input type, sensor or cable faults are displayed as SE.BR (sensor break) or SE.SH (cable short-circuited).
In case of sensor or cable fault the backlight flashes. This can be reset by pressing the \( \text{Esc} \) key. When the sensor or cable fault has been remedied, the device will return to normal operation.

13.3 Advanced functions (ADV.SET)
The device gives access to a number of advanced functions which can be reached by answering “Yes” to the point “ADV.SET”.

13.3.1 Memory (MEM)
In the memory menu a non-SIL configuration can be either saved or loaded from the local memory of the 4501 display unit. Choose SAVE to store the current configuration in the 4501 memory. Press LOAD to read a previously stored configuration in the 4501 memory and store it in the device. It is only possible to load a configuration stored from the same type of device and from the same version, or earlier.

13.3.2 Display setup (DISP)
The brightness contrast and the backlight can be adjusted.
Tag number with 5 alphanumerics can be entered.
Functional readout in line 3 of the display can be selected: choose between readout of output current or tag no. When selecting “ALT” the readout alternates between output current and tag no.

13.3.3 Password (PASS)
Here you can choose a password between 0000 and 9999 in order to protect the device against unauthorised modifications to the configuration. The device is delivered default without password.

13.3.4 Language (LANG)
In this menu you can choose between 7 different language versions of help texts that will appear in the menu. You can choose between UK, DE, FR, IT, ES, SE and DK.

13.3.5 Process calibration (CAL)
A process calibration can be made by the end user. A known process signal must be applied for both low and high end of the input measurement range. The known input of the applied low end signal must be entered in the CAL.LO menu and confirmed by pressing OK before removing or changing the applied signal to the high end signal. The known input of the applied high end signal must be entered in the CAL.HI menu and confirmed by pressing OK before removing. It is possible to enable or disable the use of the latest process calibration.

13.3.6 Power rail (RAIL)
In this menu it can be chosen if sensor errors are transmitted to the central surveillance in the PR 9410 power control device.
13.3.7 Simulation (SIM)
It is possible to override the actual measured input signal by a simulated value. In the REL.SIM menu it is possible to simulate the relay state without affecting the analogue output, by pressing ↓. Leaving the simulation menus, or disconnecting the 4501 device, will disable the simulation mode and bring the output back to correspond to the actual measured value. Simulation is not possible in SIL-mode.

13.3.8 Safety integrity level (SIL)
See section 14 - Safe parameterisation - user responsibility

14 Safe parameterisation - user responsibility

</tr>
<tr>
<td>HYST</td>
<td>Hysteresis value in REL.UNI units for IN.TYPE ≠ TEMP or in UNIT for IN.TYPE = TEMP. (for REL.FUN = SETP or WIND)</td>
</tr>
</tbody>
</table>
ERR.ACT

Relay sensor error action (for REL.FUN = SETP, WIND or ERR):
Only relevant if IN.TYPE = TEMP, CURR and I.RANGE = 4-20, POTM or LIN.R and R 0% is ≥ 18.
NONE (Note3) = Sensor error detection NOT enabled (Note4), relay state at sensor error is undefined. (NOT for REL.FUN = ERR)
OPEN = Relay contact is open at sensor error
CLOS = Relay contact is closed at sensor error
HOLD (Note3) = Relay contact holds the state as before sensor error occurred. (NOT for REL.FUN = ERR)

ON.DEL

Relay ON delay from SETP or SETP.LO/HI is crossed in units of seconds (for REL.FUN = SETP or WIND)

OFF.DEL

Relay OFF delay from SETP +/- HYST or SETP.LO/HI +/- HYST is crossed in units of seconds (for REL.FUN = SETP or WIND)

Note3: Value not allowed if the relay is used in a safety application (EN.SIL = YES) and IN.TYPE = CUR and loop supply is used to supply a current input signal.
Note4: Error detection is enabled if OUT.ERR ≠ none, but relay state at sensor error is undefined.

<td>Use the applied process calibration values: <strong>NO</strong> = The last performed process calibration is not used. The channel operates with accuracy as specified. <strong>YES</strong> = The last performed process calibration is in operation. The required accuracy must be verified by user. End user must verify by test that the applied process calibration does not introduce failures exceeding the requirements for the safety application.</td>
</tr>
</tbody>
</table>

Note^5: Value not allowed if analogue output is used in a safety application (EN.SIL = YES) and **IN.TYPE = CURR** and loop supply is used to supply a current input signal.  

Note^6: Error detection is enabled if **ERR.ACT ≠ NONE**, but analogue output value is undefined.  

### 14.2. Verification procedure  

The verification is done using the display / programming front PR 4501 and following the procedure described below.
### 14.2.1 If no password is set

<table>
<thead>

<td>As step 6 to 41 for 14.2.1</td>
</tr>
</tbody>
</table>

Note8: Open is shown briefly in the display

14.2.3 If any parameter is found to be incorrect during verification
Remove SIL-mode (by entering the password and selecting EN.SIL = NO). Go through the setup menu and correct the parameter(s). Repeat step 1 to 36 (with correct parameters).

14.3 Functional test
The user is responsible to make a functional test after verification of the safety parameters. The procedure for periodic proof test described in section 10 shall be used.
In addition, if a process calibration is taken into SIL-mode operation (refer to section 13.3 - Advanced functions), it is mandatory that the accuracy of the device (and sensor, if applicable) are tested.

15 Fault reaction and restart condition
When the 9116 detects a fault the outputs will go to Safe State, in which the outputs will be “de-energised”.
If the fault is application-specific (cable error detection) the 9116 will restart when the fault has been corrected.
Power cycle the device for bringing it out of Safe State.
16 User interface

[01] Set correct password
[02] Enter Advanced setup menu?
[03] Select Temperature input
Select Potentiometer input
Select Linear resistance input
Select Current input
Select Voltage input
[04] Select 0.0-1 V input range
Select 0.2-1 V input range
Select 1-5 V input range
Select 0-10 V input range
Select 2-10 V input range
[05] Select 0-20 mA input range
Select 4-20 mA input range
[06] Select 2-Wire sensor connection
Select 3-Wire sensor connection
Select 4-Wire sensor connection
[07] Set Resistance value low
[08] Set Resistance value high
[09] Select Celsius as temperature unit
Select Fahrenheit as temperature unit
[10] Select TC sensor type
Select Ni sensor type
Select Pt sensor type
[12] Select Decimal point position
[13] Set Display range low
[14] Set Display range high
[15] Select Relay setpoint in % of input range
Select Relay setpoint in display units
[16] Select Pt10 sensor type
Select Pt20 sensor type
Select Pt50 sensor type
Select Pt100 sensor type
[17] Select Ni50 sensor type
Select Ni 100 sensor type
Select Ni 120 sensor type
Select Ni 1000 sensor type

Routing diagram ADV.SET

Continued on the page

Routing diagram ADV.SET

Version No. V3R0
1.0 = Default state. Line 1 shows input status. Line 2 toggles between process value and UNIT. Line 3 shows output and TAG No. Line 4 shows status for relay and communication and whether the device is SIL-locked. Static dot = SIL-locked and flashing dot = not SIL-locked.

1.1 = Only if password-protected.
1.2 = Only if FastSet is activated and the relay function is setpoint.
1.3 = Only if input types support sensor error check.
   Not valid for these input signals: 0...20 mA and voltage.
1.4 = Only if input signal is temperature.
1.5 = Only if the configuration is not protected by a password.
To default state 1.0
16.3 Routing diagram - Advanced settings (ADV.SET)

Red text signifies safety parameters in a SIL configuration.

To default state 1.0

2.0 In the submenu simulation (SIM) you must press OK to return to the default state 1.0.

Verify SIL configuration

CJC connector 5910Ex.
**Displays**  Programmable displays with a wide selection of inputs and outputs for display of temperature, volume and weight, etc. Feature linearisation, scaling, and difference measurement functions for programming via PReset software.

**Ex interfaces**  Interfaces for analogue and digital signals as well as HART® signals between sensors / I/P converters / frequency signals and control systems in Ex zone 0, 1 & 2 and for some modules in zone 20, 21 & 22.

**Isolation**  Galvanic isolators for analogue and digital signals as well as HART® signals. A wide product range with both loop-powered and universal isolators featuring linearisation, inversion, and scaling of output signals.

**Temperature**  A wide selection of transmitters for DIN form B mounting and DIN rail devices with analogue and digital bus communication ranging from application-specific to universal transmitters.

**Universal**  PC or front programmable devices with universal options for input, output and supply. This range offers a number of advanced features such as process calibration, linearisation and auto-diagnosis.
