## Pretop 53xx FM Control Drawing.

5331C, 5331D, 5333C, 5333D, 5335C and 5335D transmitters are approved as intrinsically safe in Zone 0 Group IIC or Class I, Division 1, Group A,B,C,D when installed according to 53xx FM Control Drawing.

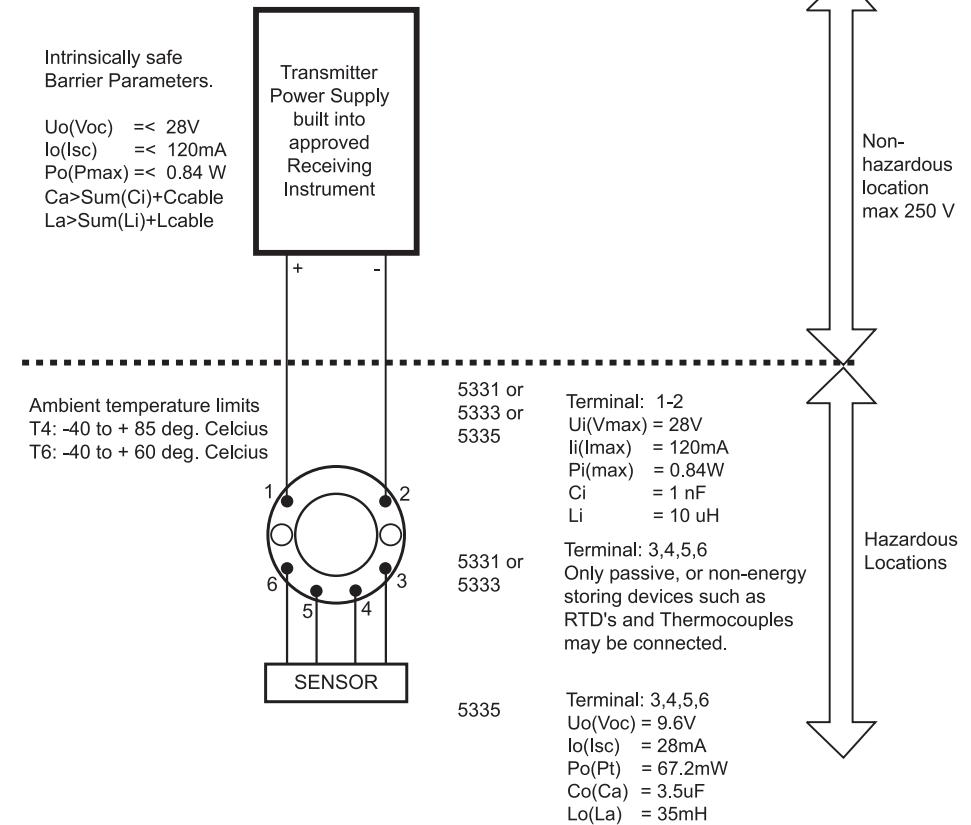

### 1. Connections with separate power supply and receiver.

Output: Standard 4 - 20mA loop

### 2. Connection with power supply and barrier built into receiver.

Output: Standard 4 - 20mA loop

### 3. The entity concept.

Equipment that is FM-approved for intrinsic safety may be connected to barriers based on the ENTITY CONCEPT. This concept permits interconnection of approved transmitters, meters and other devices in combinations which have not been specifically examined by FM, provided that the agency's criteria are met. The combination is then intrinsically safe, if the entity concept is acceptable to the authority having jurisdiction over the installation.

The entity concept criteria are as follows:

The intrinsically safe devices, other than barriers, must not be a source of power.

The maximum voltage  $U_i$ ( $V_{max}$ ) and current  $I_i$ ( $I_{max}$ ), and maximum power  $P_i$ ( $P_{max}$ ), which the device can receive and remain intrinsically safe, must be equal to or greater than the voltage ( $U_o$  or  $V_{oc}$  or  $V_t$ ) and current ( $I_o$  or  $I_{sc}$  or  $I_t$ ) and the power  $P_o$  which can be delivered by the barrier.

The sum of the maximum unprotected capacitance ( $C_i$ ) for each intrinsically safe device and the interconnecting wiring must be less than the capacitance ( $C_a$ ) which can be safely connected to the barrier.

The sum of the maximum unprotected inductance ( $L_i$ ) for each intrinsically safe device and the interconnecting wiring must be less than the inductance ( $L_a$ ) which can be safely connected to the barrier.

The maximum entity parameters  $U_i$ ,  $I_i$ ,  $P_i$ ,  $C_i$ , and  $L_i$  for the Pretop 53xx Transmitters are listed on pages 1 and 2 of this document.

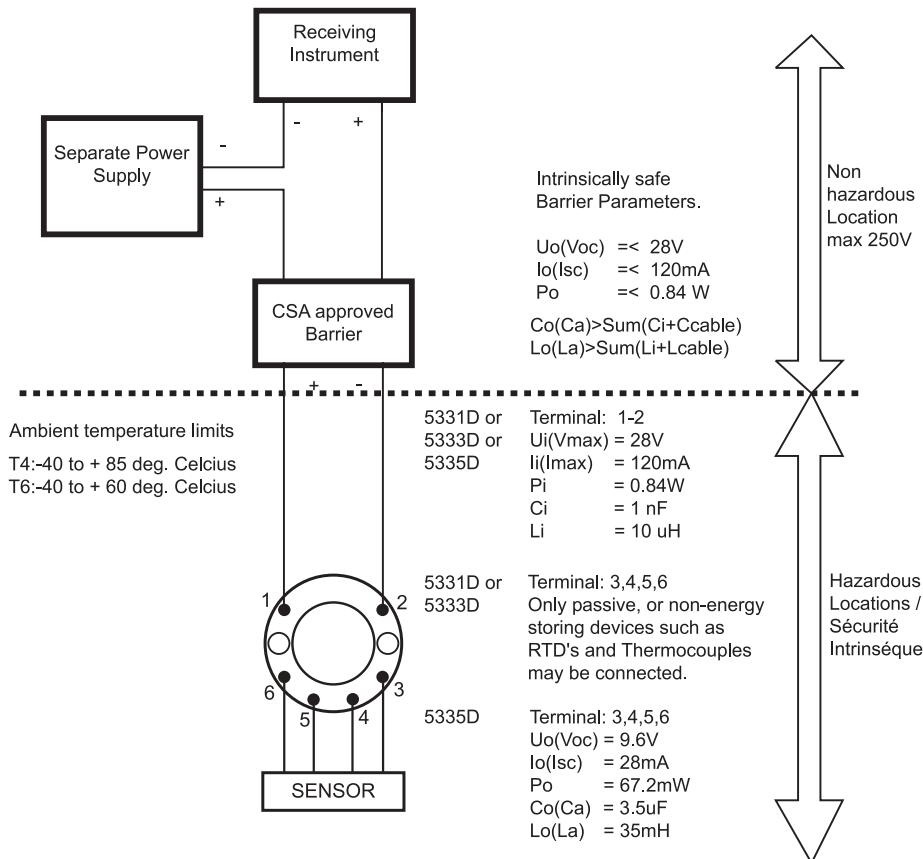

The entity parameters  $U_o$ ,  $V_{oc}$  or  $V_t$  and  $I_o$ ,  $I_{sc}$  or  $I_t$ , and  $C_a$  and  $L_a$  for barriers are provided by the barrier manufacturer.

## CSA Intrinsic Safety Installation Drawing.

5331D, 5333D and 5335D transmitters are approved as intrinsically safe in Zone 0 Group IIC or Class I, Division 1, Group A, B, C, D when installed according to Installation Drawing.

### 1. Connections with separate power supply and receiver.

**Output:** Standard 4 - 20mA loop

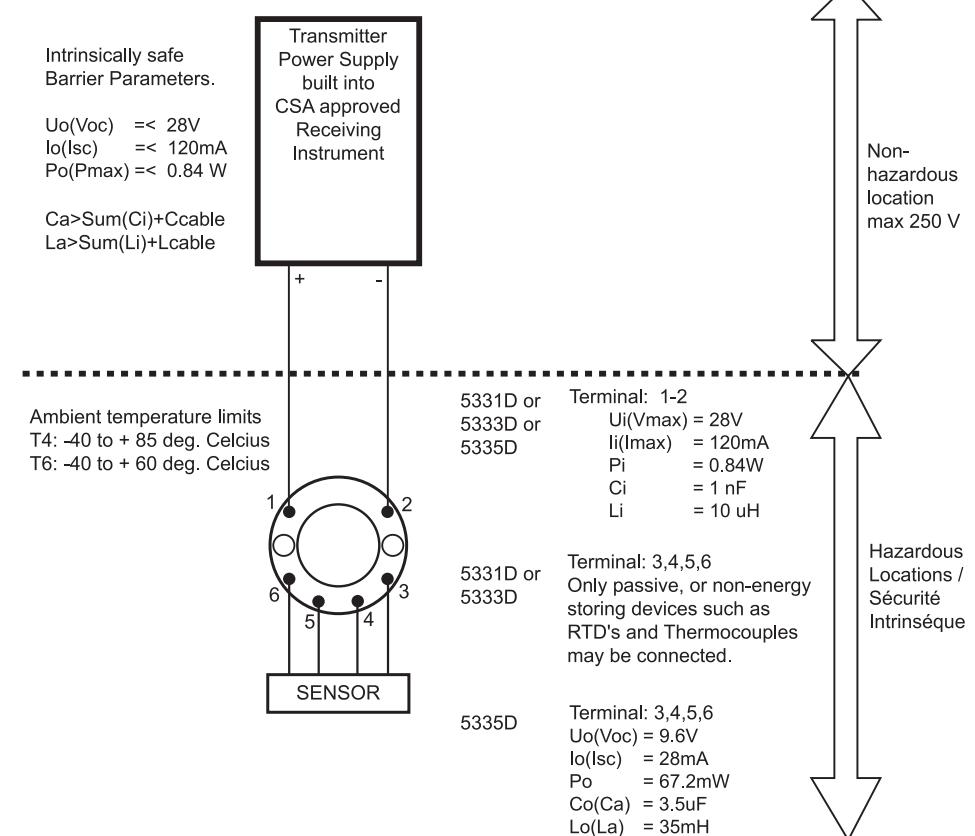

### Warning:

Substitution of components may impair intrinsic safety.

The transmitters must be installed in a suitable enclosure to meet installation codes stipulated in the Canadian Electrical Code (CEC).

### 2. Connection with power supply and barrier built into receiver

**Output:** Standard 4 - 20mA loop

### Warning:

Substitution of components may impair intrinsic safety.

The transmitters must be installed in a suitable enclosure to meet installation codes stipulated in the Canadian Electrical Code (CEC).
